Take Steps to Prevent and Control High Blood Pressure!

1. Maintain a healthy weight
   - Check with your health care provider to see if you need to lose weight.
   - If you do, lose weight slowly using a healthy eating plan and doing physical activity.

2. Be physically active
   - Be physically active for a total of 30 minutes on most days of the week.
   - Combine everyday chores with moderate-level sporting activities such as walking to achieve your physical activity goals.

3. Follow a healthy eating plan
   - Set up a healthy eating plan with foods low in saturated fat, total fat, and cholesterol, as well as high in fruits, vegetables, and low-fat dairy foods such as the DASH eating plan.
   - Write down everything that you eat and drink in a food diary. Note areas that are successful or need improvement.
   - If you are trying to lose weight, choose an eating plan that is lower in calories.

4. Reduce sodium in your diet
   - Choose foods that are low in salt and other forms of sodium.
   - Use spices, garlic, and onions to add flavor to your meals without adding more sodium.

5. Drink alcohol only in moderation
   - In addition to raising blood pressure, too much alcohol can add unneeded calories to your diet.
   - If you drink alcoholic beverages, have only a moderate amount—one drink a day for women, two drinks a day for men.

6. Take prescribed drugs as directed
   - If you need drugs to help lower your blood pressure, you still must follow the lifestyle changes mentioned above.
   - Use notes and other reminders to help you remember to take your drugs. Ask your family to help you with reminder phone calls and messages.
