

2019

Georgia Department of Public Health
District 1-1

Acknowledgements

A sincere thanks to members of the CHA Advisory Committee who contributed to the development and review of contents and data in this report: Tracy Pevehouse, Nichole Crick, and Tyra Rodgers.

The Walker County Health Department would also like to acknowledge the following members of our community for their continuous contributions and professional support throughout the process:

- Kristi Byrd The Children's Advocacy Center of the Lookout Mountain Judicial Circuit
- Rachel Robinson The Sexual Assault Victim's Advocacy Center
- Sandy Matheson Primary Healthcare Center
- Damon Raines Walker County Schools, BOH Member
- Eddie Upshaw Walker County BOH
- Kristi Lawson Family Crisis Center
- Lecia Eubanks Walker County Library
- Eddy Rushing NW Georgia Baptist Association
- Thomas Middlebrooks Environmental Health, Walker County Health Department
- John Donahoo North GA Community YMCA
- Tammy Thompson Walker County Schools
- Tim York Walker County Library
- Denise Sheehan First Baptist Church

- Bruce Coker Walker County Sheriff's Department
- Joe Legge Walker County Commissioner Office
- Steve Wilson Walker County Sheriff
- Krissy Nichols Department of Juvenile Justice
- Stacy Meeks City of Lafayette fire and EMS
- Karin Mashburn The Cottage
- Barbie Elliott Walker County Schools
- Jason Osgatharp Environmental Health, Walker County Health Department
- Dr. Richard C. Smith Walker County BOH Chairman
- Ruth Bass LaFayette Housing Authority
- Rachael Willowford Volunteer, PR Community

We would also like to extend a special thank you to the Walker County Health Department staff for their commitment and valuable insights.

Letter from Nurse Manager

It is my honor and pleasure to present to you the 2019 Walker County Community Health Assessment. I am requesting that you please take the time to review the health assessment, as it serves for a much broader picture of the Walker County community. The completion of this project would not have been possible without the time, dedication and commitment of our community partners and therefore a personal "thank you" to all who took part in this process.

While we are all segregated in our work settings, it was evident, in the meetings that were conducted throughout the health assessment that we all share a similar vision and loyalty for our community and the citizens of Walker County by the amazing work that is being implemented daily by each agency. Through our collaborative efforts, we want to continue to strive to make our community a great place to live, work and visit while continuing to improve the health of those who live and work in Walker County. Again, thank you for your time, commitment and dedication and I look forward to working with each of you again in the future.

Sincerely,

Tracy Pevehouse R.N. County Nurse Manager Walker County Health Department

Executive Summary

In 2018, the Walker County Health Department launched a major initiative to better understand the health needs of the community and to identify strategic issues and opportunities to address these needs. This process included conducting a community health assessment which not only provides a portrait of the community's health status but also identifies factors that have the potential to influence health and quality of life outcomes such as social factors, individual behaviors and physical environment.

This community health assessment utilizes a participatory, collaborative approach to look at health in its broadest context, i.e. health being a state of complete physical, mental and social wellbeing and not merely the absence of disease, as is defined by the World Health Organization (WHO). The assessment also looks at the larger social and economic factors that have an impact on health and quality of life as well as how they disproportionately affect certain populations. To make this a truly collaborative effort, community members from a broad set of organizations were engaged early on and made valuable contributions throughout the process.

Our Methodology

The Assessment was conducted using the Mobilizing for Action Planning and Partnerships (MAPP) framework. The MAPP process ensures community involvement and input throughout the assessment process and utilizes standard benchmarks to not only identify strengths, weaknesses and areas of improvement but also prioritize the strategic issues that need to be addressed in order to improve the public health services within the community.

In keeping with the MAPP methodology, this assessment incorporates data from both quantitative and qualitative sources. Quantitative data input includes primary research: The Walker County Community Health Survey, as well as secondary research which includes data collected on over 50 health indicators. Health indicators data enabled our team to identify trends, as well as comparison to benchmark data at the state and national levels to give a complete picture of health status in Walker County. Qualitative data input includes primary research gathered through a series of Key Informant Interviews and Focus Groups as well a Youth Photovoice Contest.

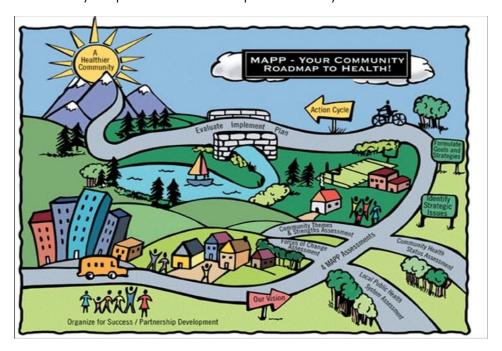

Major Findings

The results of this assessment found that when the public health system is seeking to implement positive change in the community, the goal should be to focus on creating a community that (a) has minimal rates of chronic diseases with special emphasis on healthy eating and exercise, (b) low substance abuse rates, (c) effective communication within agencies and sharing of resources, (c) is a good place to grow old, and (d) where residents have an active sense of civic responsibility.

These findings will serve as the guiding force to take strategic action and provide a structured framework for planning future health programs within the community.

Chapter 1. Introduction to MAPPi

MAPP is a community-driven, strategic planning process for improving community health. Facilitated by public health leaders, this framework helps communities to prioritize public health issues, identify resources for addressing them, and take action. MAPP is a participatory process guided by a community-generated vision; strategies and goals based on an assessment of the community's priorities and needs. It shifts the trend from being an agency focused framework to an interactive tool that improves the efficiency, effectiveness and ultimately the performance of local public health systems.

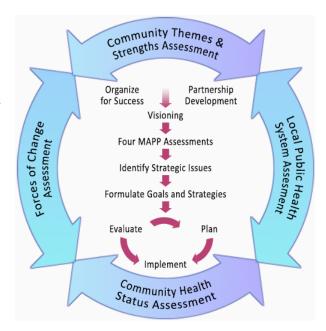

There is a total of six phases in MAPP. Each phase is illustrated in the graphic above and described in detail below.

Phase 1: Organizing for Success/Partnership Development

Phase 1 focuses on structuring a planning process that builds commitment, engages participants as active partners and orients partners to the process. During this phase the entire MAPP process is organized and planned out in order to utilize everyone's time and resources effectively.

Phase 2: Visioning

In Phase 2 the community and the committee work together to develop an overall, shared vision of health in the community that will guide the planning and action to follow. Vision and values statements provide focus, purpose, and direction to the MAPP process.

Phase 3: Four MAPP Assessments

The main feature that sets MAPP apart from other similar models is the depth of its community assessments. Each of the four MAPP assessments— Community Health Status Assessment, Forces of Change Assessment, Community Themes and Strengths Assessment, and Local Public Health System Assessment—when considered as a whole, provide the foundation for identifying the strategic health issues that need to be addressed.

- The Community Themes and Strengths Assessment asks residents to name the issues that are important to them, to talk about how they feel about the community, and to identify community assets the resources that already exist in the community that can be used to address health and other issues.
- The Local Public Health System Assessment (LPHSA) examines all elements of the public health system, from hospitals to home health aides, as well as how those elements work, how they're structured, how they interact with other sectors and elements of the community, and the nature of their resources. This assessment is completed using the National Public Health Performance Standards Program local instrument which revolves around the "10 essential services of public health".
- The Community Health Status Assessment looks at the health of community members and of the community. Quality of life issues employment, housing, the environment, etc. are also considered here as part of the community perspective on health.
- The Forces of Change Assessment examines what is happening or might happen in the future that will have an impact on community health.

Phase 4: Identify Strategic Issues

Using a participatory approach, the community and the committee examine the data collected in the previous phase to identify the key issues that must be addressed in order to realize the shared vision.

Phase 5: Formulate Goals/Strategies

Once the strategic issues are identified, the group sets goals for each, based on the vision and assessment data, and formulates strategies for reaching those goals. These goals and strategies map the route from the current circumstances of the community to the future laid out in the vision.

Phase 6: Action Cycle

This phase comprises the planning, implementation, and evaluation of the action that the group takes to achieve its goals. It's seen as a cycle because the assumption is that the process is ongoing. Action is continually evaluated and adjusted to achieve greater effectiveness. The planning/implementation/evaluation cycle continues until the community achieves its vision...and generates a new vision to work toward.

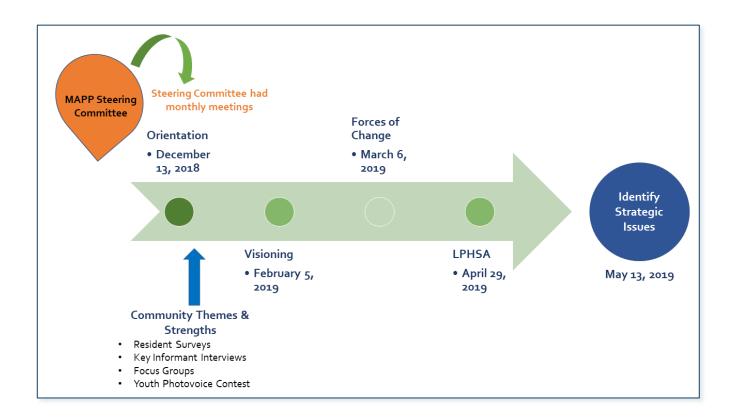

Chapter 2. MAPP in Action – Phases of MAPP

Phase I – Organizing for Success/Partnership Development

Phase I began with recruitment of an internal work group and a steering committee. Key members of the community were extended invitations to serve on the steering committee. They included individuals from the Board of Health, local public health staff, environmental staff, hospital staff, first responders, local county and city school representatives, faith representatives, as well as citizens of Walker County who represented their non-profit organizations or local businesses. All in all, the steering committee represented a diverse group of individuals who all brought their individual expertise, and this is one reason for assembling a diverse MAPP Committee – to get as many individuals and organizations in the community as possible moving in the same direction and communicating well with one another.

Apart from the recruitment of the steering committee, planning for the phases of MAPP process was also carried out. Budget was set aside, and a working timeline was established. Roles/objectives of the process were laid out and preparations were made to address upcoming phase requirements. The survey instrument and Key Informant questions were designed, and the evaluation was planned out. The following graphic shows the MAPP timeline that was followed for the Walker County MAPP process:

MAPP Timeline

Phase II – Visioning

The Vision and Values were finalized over the course of two meetings held in February with the steering committee and some key community members from Walker County. The participants in the first meeting teased out common ideas and themes through a collaborative process, while the smaller workgroup committee worked on finalizing the Vision statement and Values over the course of the second meeting.

Vision:

The participants in the community-wide meeting were given the opportunity to answer the following three questions:

- What does a healthy Walker County mean to you?
- What are the important characteristics of a healthy community for all who live, work and play here?
- How do you envision the local public health system in the next five to ten years?

Each member put one idea/thought per post-it and used charts around the room to answer these questions. The participants then convened into a smaller group to complete an Affinity diagram to organize the common themes and ideas under broader groups and develop a shared consensus. A small workgroup meeting was held the next day to finalize the Vision statement.

"A safe, educated, empowered community, where healthy people live, work and play"

Values:

The questions posed to the community members for brainstorming a set of Values, were as follows:

- What are the key behaviors that will be required of the local public health system partners, the community and others in the next five to 10 years to achieve our vision?
- What can we do to ensure community involvement/engagement in achieving our vision?

Economic Development: A community that has ample jobs and economic growth opportunities for all.

Personal Growth: A community that encourages personal growth in a nurturing environment.

Accessibility: A community that looks after its citizens with easy access to services for all.

Communication: A community that values the importance of communication and transparency.

Collaboration: A community focused on working together towards one goal.

Funding: A community that will strive to secure funding to improve the overall quality of life for its residents.

Measurable Progress: A community that believes in getting results and not just the process.

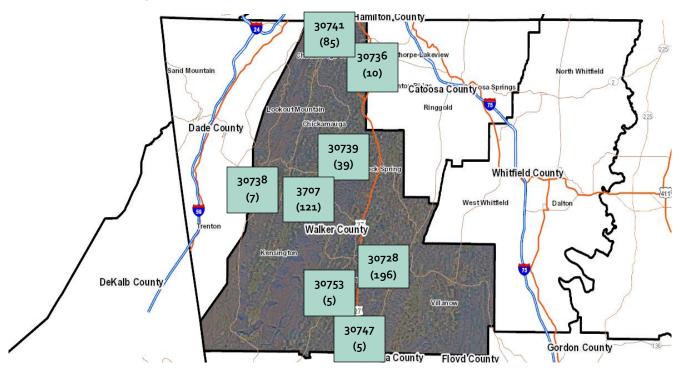

Phase III – Four MAPP Assessments

Community Themes and Strengths Assessment

The Community Themes and Strengths Assessment consisted of various methods of data collection in order to include a wide range of resident input across Walker County.

Resident Surveys

The Walker County community health survey was distributed to residents via an online link and in the form of printed copies. Walker County partners disseminated the survey link via their networks by sending an email announcement out to their contacts and organizational email databases. The survey was also promoted using social media as well as local media. Additionally, staff and volunteers from organizations were asked to disseminate the survey in hard copy format to their clients or community residents and some hard copies were distributed via local community events. To ensure uniformity, population estimates were determined based on each zip code and sample sizes were computed using the sample size calculator to inform the distribution of surveys across each zip code. The following illustration shows the number of survey responses received from each major zip code within Walker County:

Source: Walker County Map- ArcGIS

The survey consisted of questions on demographic information including zip code, gender, age, marital status, household income, education level, race/ethnicity, and how the respondent usually paid for health care costs. The first half of the survey looked at the individual's perceptions of the health issues impacting the community including unhealthy behaviors and issues related to well-being. The second half asked the residents to rate their overall quality of life. Several themes emerged which are summarized as follows:

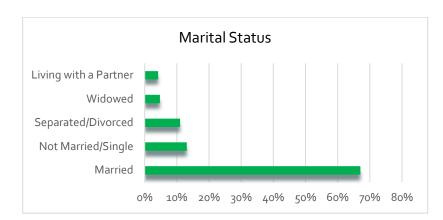

Demographic Data

The majority of survey respondents fell within the 26-54 age range and most of them (83%) were females. The racial make-up of survey respondents reflects that of the population of Walker County with a majority of Whites, followed by African Americans and Hispanics. Around 26% had completed some college degree while 48% had a college degree or higher education credentials and only 5% of respondents had a less than high school education.

Healthcare Questionnaire

Q: Do you receive the majority of your healthcare in Walker County?

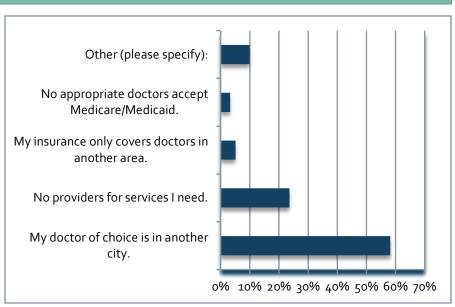

Source: 2019 Walker County Community Health Survey

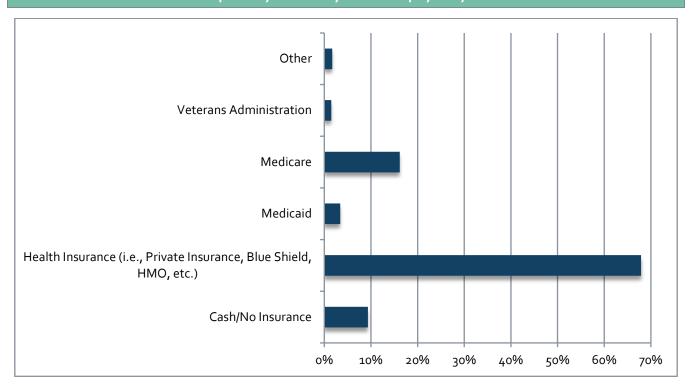

Q: If you received health care outside your community, select below which matches why:

Majority (58%) of survey respondents indicated that the main reason for getting healthcare services outside of the community is due to their doctor of choice being in another city, followed by (24%) of responses indicating inadequate providers for services they need, within the county.

Some open-ended responses included reasons such as transportation, hospital preference and proximity from the healthcare facility of choice.

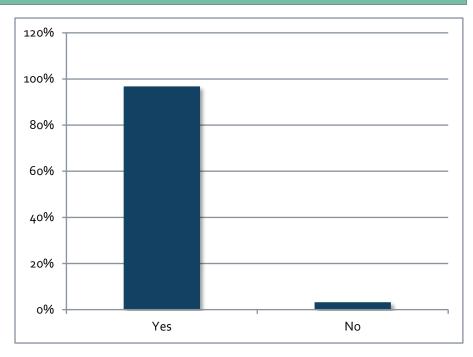

Q: What is the primary method you use to pay for your healthcare?

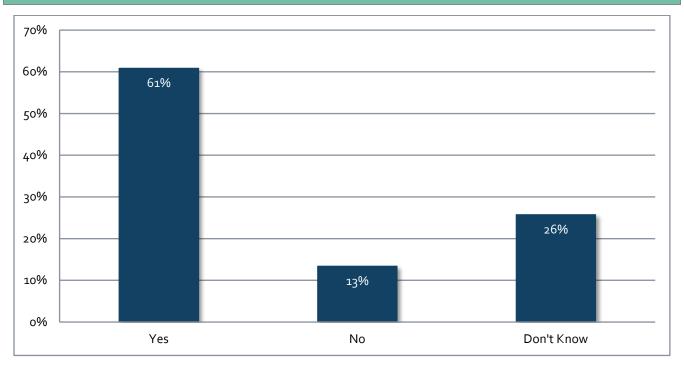

Source: 2019 Walker County Community Health Survey

Q: Do you have reliable transportation when you need to get to the doctor?

An overwhelming majority of the respondents (97%) indicated that they had reliable transportation when they needed to get to a doctor.

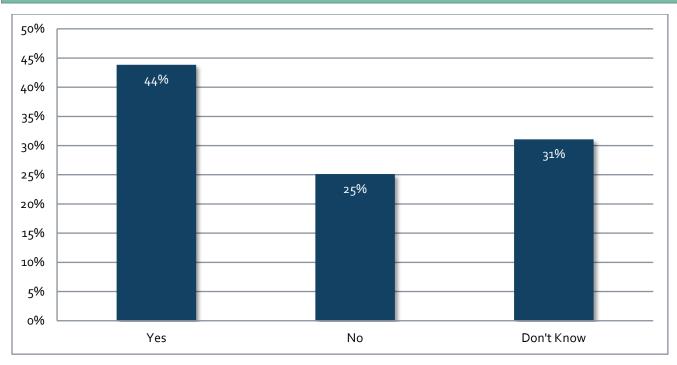

Q: Is basic healthcare, such as regular checkups, available and affordable in the community?

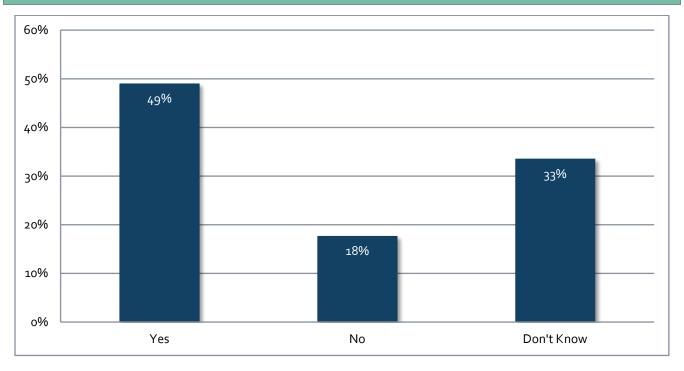

Source: 2019 Walker County Community Health Survey

Q: Do you think screenings and preventive healthcare services are available and affordable in the community?

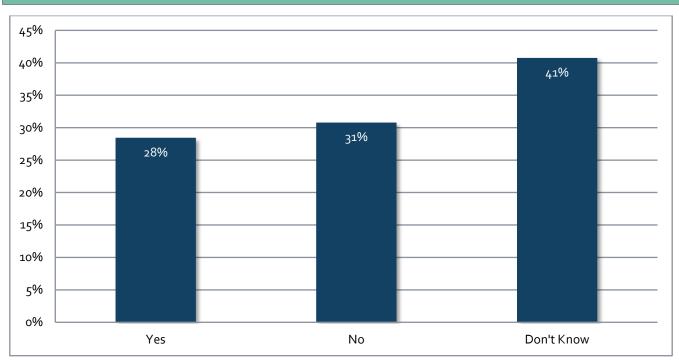

Q: Do people in the community have access to health and wellness information?

Source: 2019 Walker County Community Health Survey

Q: Do you think financial help is available for people with healthcare needs in the community?

Q: How would you rate the overall health of your community?

Of all the respondents who completed the survey:

1% felt that they were "VERY HEALTHY"

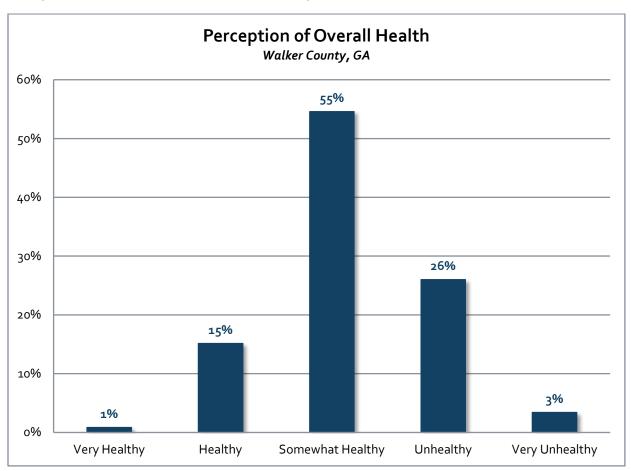

15% felt that they were "HEALTHY"

55% felt that they were "SOMEWHAT HEALTHY"

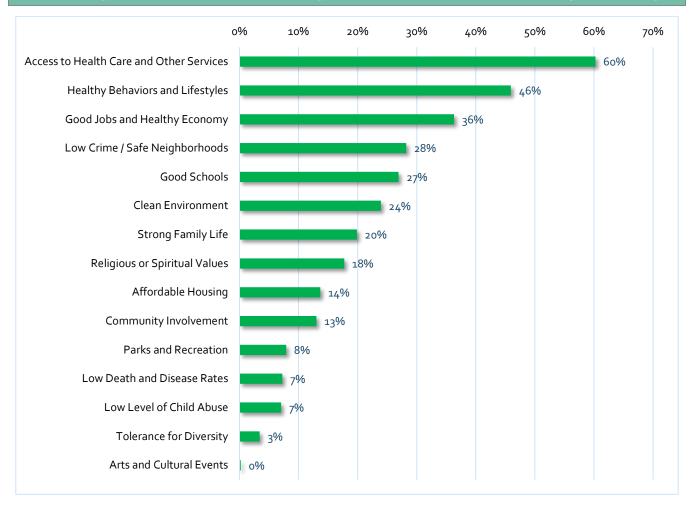

26% felt that they were "UNHEALTHY"

3% felt that they were "VERY UNHEALTHY"

Most survey respondents thought that the overall health of the community ranges from somewhat healthy to healthy and only 1% of the residents perceived the community's health as being "Very Healthy". This shows a trend that leaves room for intervention efforts especially targeted towards preventive healthcare, thereby improving the overall community health and elevating the quality of life for its residents.

Q: What do you think are the three most important factors that define a "Healthy Community"?

Source: 2019 Walker County Community Health Survey

When asked about the three most important factors that define a healthy community, the Walker County Community Health Survey respondents indicated the following as their top 3 choices:

- 1. Access to Healthcare and services
- 2. Healthy Behavior & Lifestyles
- 3. Good Jobs and Healthy Economy

The data from this question was further analyzed in Excel Database to see if any trends or patterns existed between race/ethnicity of the individuals, education level and income level. These trends identify different areas of priority for different sets of population and highlight the importance of targeted interventions to bring about change, instead of a one size fits all approach.

Healthy Community Perceptions according to race

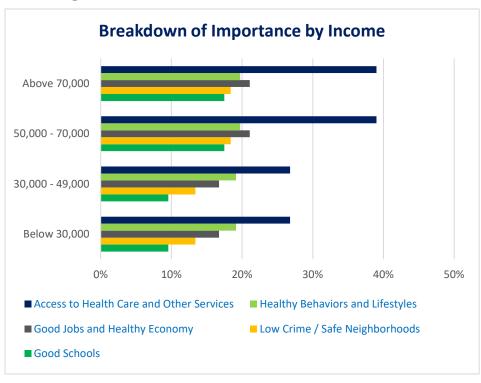

Across all races/ethnicities, Access to Healthcare remained the top characteristic for most of the respondents. However, Healthy Behavior & Lifestyle was one of the top 3 answers for White and Black/African American population but was further down the list for Hispanic and Asians who chose Good Jobs/Healthy Economy as their top most priority issues, instead.

Priority	White/Caucasian	African American/Black	Hispanic/Latino	Asian/Pacific Islander	Native American
1	Access to Health Care and Other Services	Access to Health Care and Other Services	Clean Environment	Access to Health Care and Other Services	Access to Health Care and Other Services
2	Healthy Behaviors and Lifestyles	Healthy Behaviors and Lifestyles	Good jobs and Healthy Economy	Parks and Recreation	Clean Environment
3	Good jobs and Healthy Economy	Strong Family Life	Strong Family Life	Good jobs and Healthy Economy	Healthy Behaviors and Lifestyles
4	Low Crime / Safe Neighborhoods	Good Schools	Low crime / Safe Neighborhoods	Healthy Behaviors and Lifestyles	
5	Good Schools	Affordable Housing	Smoking/Drug Awareness	Strong Family Life	
6	Clean Environment	Good jobs and Healthy Economy	Community Involvement	Clean Environment	

Source: 2019 Walker County Community Health Survey

Healthy Community Perceptions according to Income level

According to Income, Access to Healthcare stayed at the top for all income level respondents. Healthy Behaviors & Lifestyles was the second most important characteristic for all population except for 50,000 and above income range where Good Jobs & Healthy Economy was their second most important followed by Healthy Behaviors & Lifestyles.

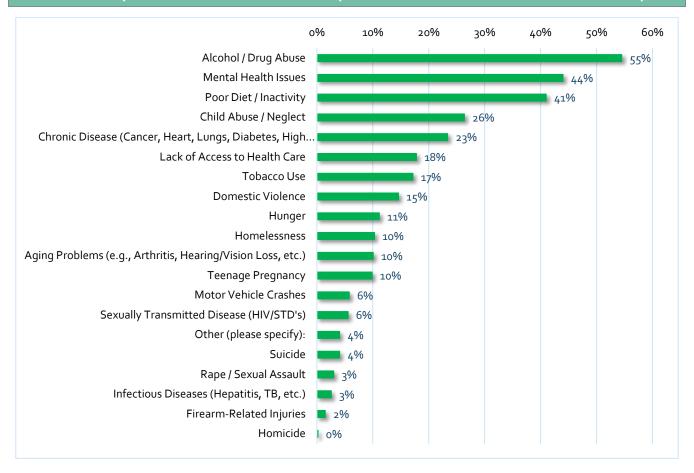

Healthy Community Perceptions According to Education level

According to Education Level, Access to Healthcare was the top answer across most education levels, except respondents with a professional education degree, who thought Healthy Behaviors & Lifestyles was the foremost priority. Good Jobs and Healthy Economy was almost consistent across the board except Master's degree and above where it was replaced by Religious or Spiritual Values and Low Crime/Safe Neighborhoods.

Priorit y	High School Diploma/ GED Equivalent	Less Than High School	Some College/N o Degree	Associate's Degree	Bachelor's Degree	Master's Degree	Doctoral Degree
1	Access to Health Care and Other Services	Access to Health Care and Other Services	Access to Health Care and Other Services	Access to Health Care and Other Services	Access to Health Care and Other Services	Healthy Behavior s and Lifestyles	Access to Health Care and Other Services
2	Healthy Behaviors and Lifestyles	Good Schools	Healthy Behaviors and Lifestyles	Healthy Behaviors and Lifestyles	Healthy Behaviors and Lifestyles	Access to Health Care and Other Services	Healthy Behaviors and Lifestyles
3	Good Jobs and Healthy Economy	Healthy Behaviors and Lifestyles	Good Jobs and Healthy Economy	Good Jobs and Healthy Economy	Good Jobs and Healthy Economy	Good Jobs and Healthy Economy	Religious or Spiritual Values
4	Clean Environ- ment	Good Jobs and Healthy Economy	Low Crime / Safe Neighbor- hoods	Good Schools	Good Schools	Low Crime / Safe Neighbor- hoods	Low Crime / Safe Neighbor- hoods
5	Low Crime / Safe Neighbor- hoods	Low Crime / Safe Neighbor- hoods	Clean Environ- ment	Affordable Housing	Low Crime / Safe Neighbor- hoods	Strong Family Life	Clean Environ- ment
6	Good Schools	Clean Environment	Good Schools	Low Crime / Safe Neighbor- hoods	Clean Environ- ment	Good Schools	Good Schools

Q: What do you think are the three most important "Health Problems" in the community?

Source: 2019 Walker County Community Health Survey

The top 3 "Health Problems" for the community were:

- 1. Alcohol/Drug Abuse
- 2. Mental Health Issues
- 3. Poor Diet/Inactivity

Health Problem Perceptions According to Race

Alcohol/Drug Abuse remained on the top for all racial/ethnic groups in the county. However:

- Mental Health was the top concern for White, while the Black/African American and Hispanic population thought that Lack of Access to Healthcare was their top priority issue.
- Hispanic/Latino community put Lack of Access to Healthcare as their top issue followed by Poor Diet/Inactivity and Hunger as the 3rd most important issue in the community.

White/Caucasian	Black/African American	Hispanic/Latino
 Alcohol / Drug Abuse 	 Lack of Access to Health 	 Lack of Access to Health
2. Mental Health Issues	Care	Care
3. Poor Diet / Inactivity	Alcohol / Drug Abuse	Poor Diet / Inactivity
, ,	Poor Diet / Inactivity	3. Hunger

Health Problem Perceptions According to Education

Some differences were also found between responses according to education level of the respondents, highlighted by the chart below:

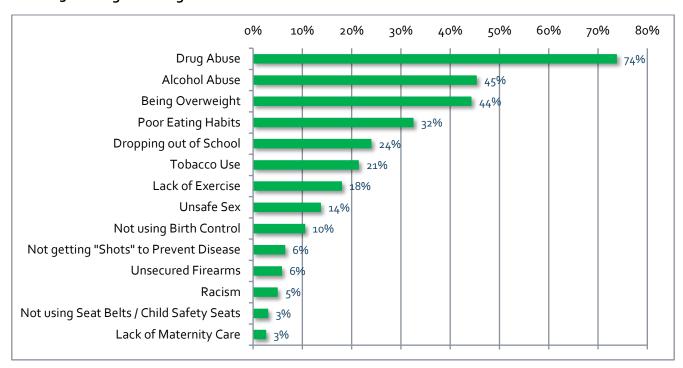

Priority	High School Diploma/GED Equivalent	Less than High School	Some College/No Degree	Associate degree	Bachelor's Degree	Master's Degree	Doctoral Degree
	Alcohol / Drug	Mental	Alcohol /	Alcohol /	Alcohol /	Poor Diet	Poor Diet
1	Abuse	Health	Drug Abuse	Drug	Drug Abuse	/	/
		Issues		Abuse		Inactivity	Inactivity
	Mental Health	Alcohol /	Mental	Mental	Poor Diet /	Alcohol /	Chronic
2	Issues	Drug	Health	Health	Inactivity	Drug	Disease
		Abuse	Issues	Issues		Abuse	
	Poor Diet /	Child	Poor Diet /	Poor Diet /	Mental	Mental	Mental
3	Inactivity	Abuse /	Inactivity	Inactivity	Health	Health	Health
		Neglect			Issues	Issues	Issues

Source: 2019 Walker County Community Health Survey

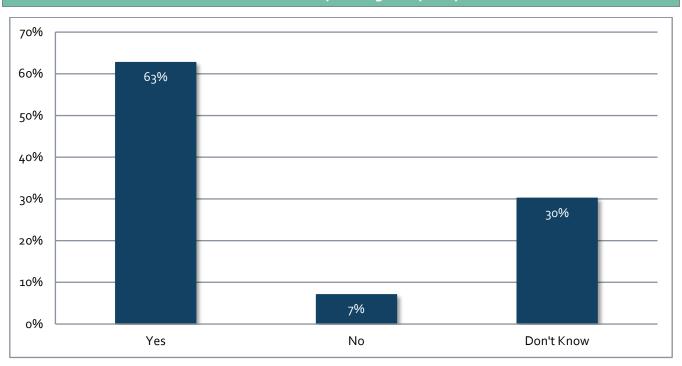

Q: What do you think are the three most important "Risk Behaviors" in our community?

The top 3 "Risk behaviors" in the community were:

- 1. Drug Abuse
- 2. Alcohol Abuse
- 3. Being Overweight

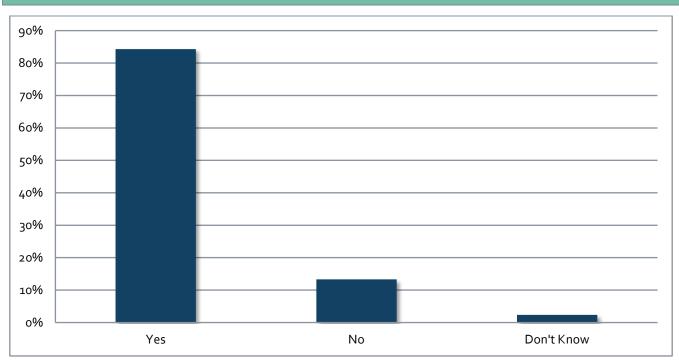

Is the community air of good quality?

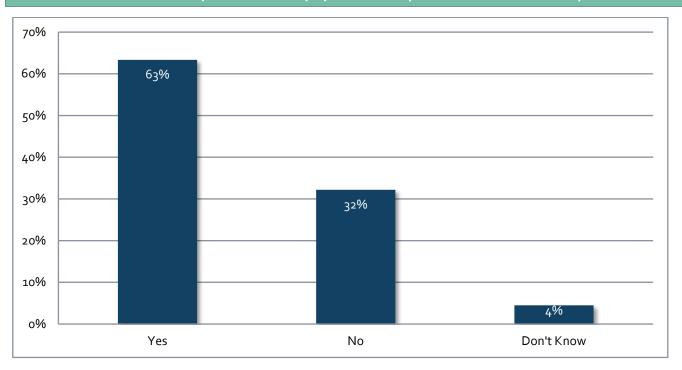

Source: 2019 Walker County Community Health Survey

Q: Is there adequate access to grocery stores in the community?

Q: Is there adequate access to physical activity needs in the community?

Source: 2019 Walker County Community Health Survey

Q: What are the "three" things you like most about living in your community?

The last three questions of the survey were open ended questions with qualitative data which was analyzed by first grouping common themes and then making an Affinity diagram of all the responses.

The top three strengths of Walker County, as indicated by its residents are as follows:

- 1. People
- 2. Small Town
- 3. Schools

Q: What are the "three" things you would like to improve about your community?

The top three things residents thought needed to be improved in the community are as follows:

- 1. Roads/Transportation
- 2. Recreational Opportunities
- 3. Employment

Q: What is an effective way to get residents involved in the community?

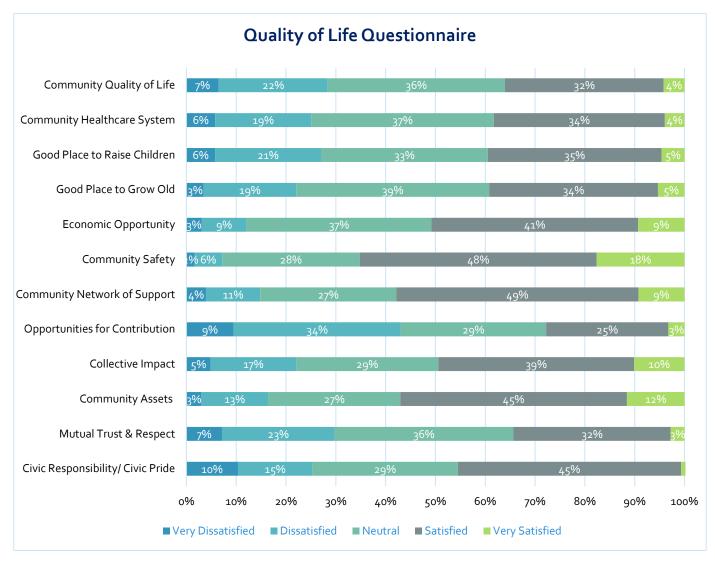

Residents thought that more advertising and planning fun community events was needed around the county in order to get everyone involved.

- Community Outreach Events
- Organized Recreational Activity
 Schools

Quality of Life Questionnaire

The quality of life questionnaire was adapted from the National Association of County and City Health Officials (NACCHO) quality of life questions and it measures resident perceptions across 10 topics which deal with community quality of life for its residents.

Results Summary

The residents mostly indicated a level of satisfaction across all 10 domains of quality of life in Walker County. The highest satisfaction score was for Economic Opportunity, Community Safety and Community Assets and Community Network of Support, while the lowest performing domains included Opportunities for Contribution, Mutual Trust & Respect and Overall Community Quality of Life and Community Healthcare System.

Resident Survey Data Limitations

As with all research efforts, there are several limitations that should be acknowledged. One limitation is the sampling methodology used by the community health assessment survey (dissemination online and via community partners and social media). This survey used a convenience sample rather than a random or probability sampling methodology; therefore, the sample may not be representative of the larger population. While racial/ethnic demographic characteristics of the survey respondents indicate respondents were similar to the distribution of residents overall, the sample may not be representative since it was not randomly selected. Another noteworthy limitation is the length of the survey which consisted of 30 questions overall, including the quality of life questionnaire. This has implications, not only on the response rate, but the quality and accuracy of the responses as well. An attempt was made to minimize survey fatigue by providing multiple choices for several questions that were open-ended in the initial survey design. The time spent on completing the surveys for most respondents was noted to be around 7-8 minutes. Self-reported data also comes with its own set of limitations. In some surveys, reporting and recall error may differ according to a risk factor or health outcome of interest.

Despite these limitations, the self-reported survey included in this report has the potential to benefit from large sample sizes to identify trend and patterns over time. This information will be valuable especially when the survey is repeated every few years and the trends can be compared to the previous years. It will not only help to capture the change in perceptions with time but also to track progress towards goals and objectives set in response to this assessment.

Key Informant Interviews

To get a deeper understanding of the issues facing Walker County residents, a few community members, based on their residence status and roles in the community, were selected for Key Informant Interviews. This list included public health representatives, some health professionals, social service providers, and a variety of other community leaders. Potential participants were chosen because of their ability to identify primary concerns of the populations with whom they work, as well as of the community overall, keeping in mind that the representation also encompasses the minorities and the underserved.

In all, 12 Key Informant Interviews were conducted in person. The broad set of organizations they represent, are listed as follows:

Organizations Represented

- Walker County School System
- YMCA
- Walker County Library
- First Baptist Church
- Family Crisis Center
- Walker Board of Health

- LaFayette Housing Authority
- Walker County PR Community
- CHI Memorial
- NW Georgia Baptist Association
- Walker County Emergency Management (Fire Department)

Key Informant Data

Common Themes

The qualitative data from the Key Informant Interviews was synthesized and analyzed thematically for main ideas and sub-themes. Topics from the interview questions and intensity of discussions on a specific topic were key indicators used for extracting the main themes. The common themes that emerged across all groups and interviews are summarized below; while the detailed breakdown of the interviews (without personal identifying information), as well as the interview guide, is available on request.

Health in Walker County

When participants were asked about what a healthy Walker County means, most of them acknowledged the fact that health means more than just physical health and encompasses the body and mind as whole. They stressed the importance of equal access for all, education, community involvement, expanding services to the community and a great place to live, work and play with good jobs and a good spiritual connection. They rated the status of health in Walker County as being generally good and, on the mend, noting how it has improved a lot compared to the previous years. Some of the reasons highlighted for this improvement include: good economy, awareness among people, better education, public engagement and great

leadership. Some of the areas that still need improvement included equitable access for all and a interagency collaboration and sharing of resources.

"I believe the county government officials are interested in improving the overall quality of life among its residents and are finally reaching out to the right people." — **Key**informant interview participant

Health Equity

The interview participants noted that socioeconomic differences including financial resources and lack of education as well as individual behaviors play an important role in determining a person's healthcare status.

"Stress is one of the driving factors and everyday stress causes people to make hasty choices which are often times bad for themselves and their family." – **Key informant** interview participant

They also stressed the need to change the overall mindset of people and encourage healthy behaviors and lifestyle choices not only for themselves but the future generations to come, thereby highlighting the importance of learned behavior and the need to bring about a social change which would benefit all community members.

"Mindset change is always the most difficult, since there are many cultural issues that one has to consider. Therefore, communication and collaboration is very important so that everyone feels like their concerns are important and no one is left behind." – **Key**informant interview participant

"Healthcare Disparities exist and are more marked in some areas compared to others, such as in the city of Rossville. Policies are inadequate to bring about a change and need to be revised and re-considered with input from people from all walks of life."—**Key**informant interview participant

Community Strengths/Resources

While the participants mentioned many strengths and resources, a recurring theme was the strong faith community in Walker County and the Walker County School System. Participants also mentioned the close-knit community, local government especially the commissioner's office, Sheriff's office to be a great strength to bring people together and work towards a common agenda.

"Churches sometimes can work in silos and there is need for better collaboration opportunities among the faith community." – **Key informant interview participant**

Interview participants also mentioned some agencies which are influential in the community and doing great work especially the Walker County Library which serves as a one stop shop for community events, resource information guidance, and just as a means for people to come together and be productive citizens.

Community Concerns

The following issues were the top concerns according to the interview participants:

- 1. **Communication** Participants agreed that good communication helps community leaders explain decisions, distribute information, and develop a solid relationship with everyone in the community.
- 2. **Opioids/Substance Abuse** An overwhelming majority of the interview participants mentioned the rising opioid and substance abuse statistics and the future implications if this issue is not addressed.
- 3. Mental Health Participants emphasized the lack of mental health services in the community. They stressed the need to have easy access to mental health services especially for the children and the youth.
- **4. Transportation** Many of the participants mentioned the need of better transportation services in the community as conveyed to them by the population they served. It was noted that several of the issues can be addressed when better access to services is provided.
- 5. Housing Participants conveyed the need for more affordable housing in the community. The growing homelessness issue was mentioned multiple times and an emphasis was made on a long-term solution.

"There seems to be a culture of not accepting change without which no community can progress." – **Key informant interview participant**

Community Threats

In describing some of the barriers people face in the community, the participants identified lack of a family structure along with some of the issues from the past discussion including transportation issues, lack of communication, and financial resources.

"People need to distinctly identify wants vs. needs and then prioritize!" – **Key informant interview participant**

Several participants also recognized lack of resources due to possible lack of funding or information regarding the resources available to those in need and not enough collaboration among agencies to address the community issue so that there is ample information sharing and duplication of efforts can be avoided.

Youth Photo Voice Contest

While conducting this assessment, it was important that the Youth of Walker County also get involved and we wanted to understand how youth perceive health issues and how they can become advocates for health promotion in their communities. For this reason, a Youth Photo Voice contest was initiated among High Schools and Colleges throughout the county. Flyers were distributed with the help of school superintendents and principals and the youth of Walker County were asked to answer the following question with a picture and a short story or a caption:

What does a Healthy Walker County mean to you?

Photo Voice entries discussed a variety of topics reflected in their pictures that included unhealthy food choices, inducers of stress, friends, emotions, environment, health, and positive aspects of family. The steering committee members voted to choose the winning photographs during one of the meetings.

"Focus on the weight you lift; not the weight you are".

-First Prize (Ridgeland High School)

"First Sprout of Spring from a Plentiful Earth. It's almost spring time in Walker County, Georgia. The beautiful red, pink, purple, and yellow flowers that bloom in the spring time is what a healthy Walker County means to me. The first sprout of spring is a healthy reminder that winter is almost over, and spring is just around the corner!"

-Second Prize (Ridgeland High School)

"To me clean and pure is when you can go on walk in your yard or in your neighborhood and smell the fresh air and be able to enjoy nature. I live in Chickamauga and I live near a lot of people that own land and I love going on walks and nature trails that are right in my backyard."

-Third Prize (Ridgeland High School)

The staff from the Walker County Health Department met with the winning students who were all from Ridgeland High School and awarded the First, Second and Third place prizes.

- Winners of the Youth Photo Voice Contest with Health Department Staff and Assistant Principal

Community Health Status Assessment

Geography

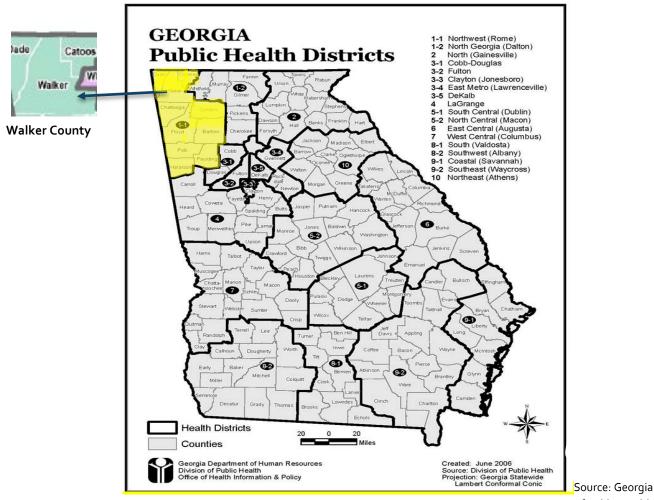

Walker County is a county located in the northwestern part of the U.S. state of Georgia. The county was created on December 18, 1833, from land formerly belonging to the Cherokee Indian Nation. Walker County is home to 17 sites on the National Register of Historic Places, including the Courthouse, which was constructed in 1917.

The county government of Walker is found in the county seat of LaFayette. Walker County is home to parts of Chattahoochee National Forest and the Chickamauga and Chattanooga National Military Park.

Source: Walker County Court of Clerks, Visitors Bureau

In terms of Public Health Districts, Walker County is part of Northwest Georgia, District 1-1 which is comprised of 10 counties: Walker, Catoosa, Chattooga, Dade, Floyd, Gordon, Haralson, Paulding, Polk & Walker.

Department of Public Health

Demographic Characteristics

Total Population & Population Characteristics

Walker County's estimated population is 68,609 according to the 2013-2017 American Community Survey 5-Year Estimates. The Annual estimates of the resident population, according to the American Community Survey (ACS), 2018 puts Walker County Population at 69,410. However, for the purpose of this report and in order to ensure equitable comparison with state and national standards the 2017 population estimates from the American Community Survey will be used.

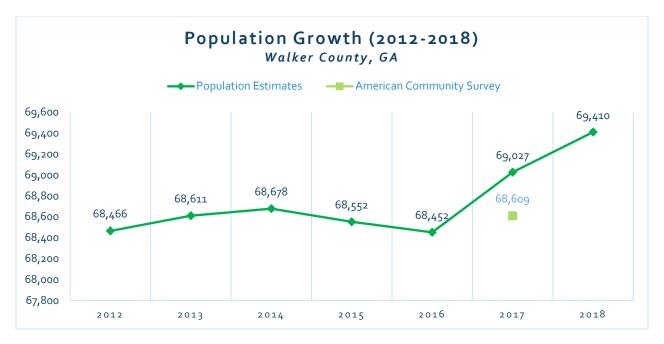

The table below highlights selected population data from the 2013-2017 ACS in comparison to the state of Georgia and United States:

	Walker County	Georgia	United States
Population			
Total Population	68,609	10,201,635	321,004,407
Male	49.4%	48.7%	49.2%
Female	50.6%	51.3%	50.8%
Population under 18 years	22.3%	24.5%	22.9%
Population 65 years and older	17.6%	12.7%	14.9%
Median Age (Years)	41.4	36.4	37.8
Race			
White	92.3%	59.4%	73%
Black/African American	4.3%	31.3%	12.7%
American Indian and Alaska Native	0.1%	0.3%	0.8%
Asian	0.7%	3.8%	5.4%

No health insurance coverage (Under 19)	9%	7.8%	5.7%

Source: U.S Census Bureau, 2013-2017 American Community Survey 5-Year Estimates

Population Growth

Population growth rates give a fair idea of the changing demographic trends within a community and also the number of people competing for community resources. Walker County's growth rate shows a consistent upward trend for the past 3-4 years, with a growth rate of 0.55% in the year 2018. Walker County, Georgia is the 35th largest county in Georgia.

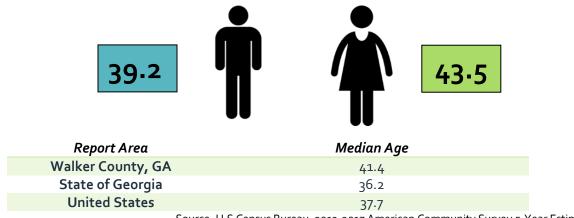

Source: U.S. Census Bureau (2012-2018)

Age

Median Age

The total median age of Walker County residents is 41.4 and shows a trend towards aging population compared to the previous years. The gender distribution and the state and national comparisons are shown below:

Source: U.S Census Bureau, 2013-2017 American Community Survey 5-Year Estimates

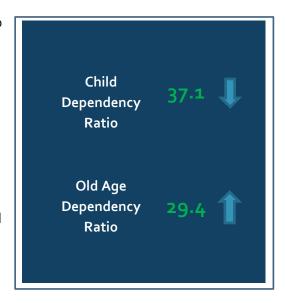

Percentage Age Distribution

Population	County	State
Under 18 years	22.3%	24.5%
18 years and over	77.7%	75.5%
65 years and over	17.6%	12.7%

Source: U.S Census Bureau, 2013-2017 American Community Survey 5-Year Estimates

The age structure of Walker County can be understood using two additional concepts; the child dependency ratio and the old age dependency ratio. The child and the old age dependency ratio include the non-productive sectors of the population.

The child dependency ratio compares the population under the age of 15 (the non-productive sector) with those between 15-64 (the productive sector). In 2011, the ratio was 38.6:100 and by 2017 it had declined to 37.1:100. The old age dependency ratio compares the population over 65 (the non-productive sector) with those between 15-64 (the productive sector). In 2011 the old age dependency ratio was 24.3:100 and it had increased to 29.4:100 by the year 2017. This again points towards an aging population trend in the county.

Race and Ethnicity

The U.S. Census Bureau considers race and ethnicity to be two separate concepts which can be understood as follows:

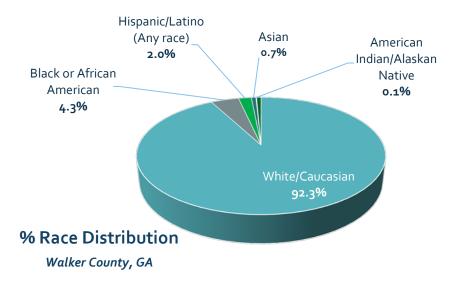

Race

Race is defined as a person's self-identification with one or more social groups. An individual can report as White, Black/African American, Asian, American Indian and Alaska Native, Native Hawaiian and Pacific Islander, or some other race.

Ethnicity

Ethnicity determines whether a person is of Hispanic origin or not and reports Hispanic or Latino or Not Hispanics or Latino. Hispanics may report as any race.

In Walker County, the majority population is White (92.3%), followed by Blacks or African American (4.3%) and Hispanic (any race) constitute about 2% of the population. In Walker County, 2.14% of the population does not speak English at home, compared to 21% nationwide. Other languages spoken at home include Spanish (1.4%), other Indo-European languages (0.3%) and Asian or Pacific Islander languages (0.5%).

Source: U.S. Census Bureau – American Community Survey (2018)

Socioeconomic Characteristics

Education

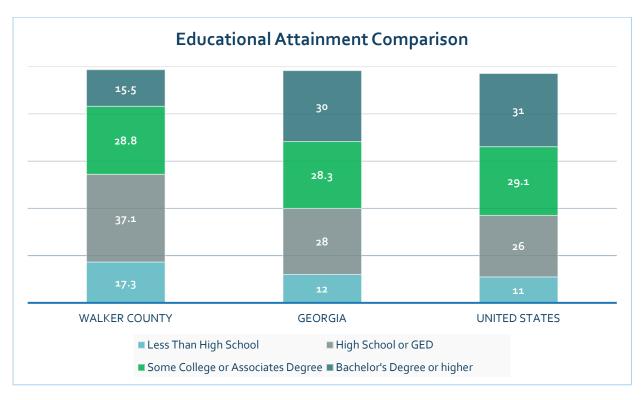

Education is one of the best socioeconomic indicators for good health. Inadequate education and increased dropout rates not only affect children's academic achievement and indicate low socio-economic status of the community but are also associated with a deteriorating quality of life for the individual. Research has found linkages between level of education and various health risk factors such as smoking, drinking, diet and exercise, illegal drug use, household safety and use of preventive medical care. Thus, improving school systems and early intervention programs may help to reduce some of these risk factors and help elevate the quality of life for individuals.

High School Graduation Rate - 88%

College/ Career Readiness Rate - 48.7%

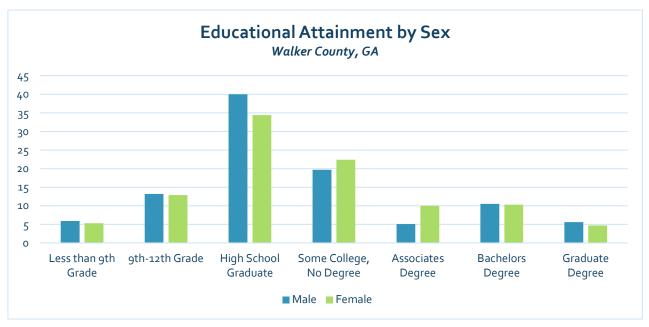

The overall percentage of Walker County students with High School or GED as their highest education attainment is 37%, compared to GA (28%) and the United States (26%). However, the higher education rate (Bachelor's Degree & Graduate Degree or higher) in Walker County is less than both Georgia and United States at only 15.5%. Also notable is the high school dropout rate at 17.3% for Walker County, compared to 12% and 11% for Georgia and United States respectively.

Source: U.S. Census Bureau – American Community Survey (2018)

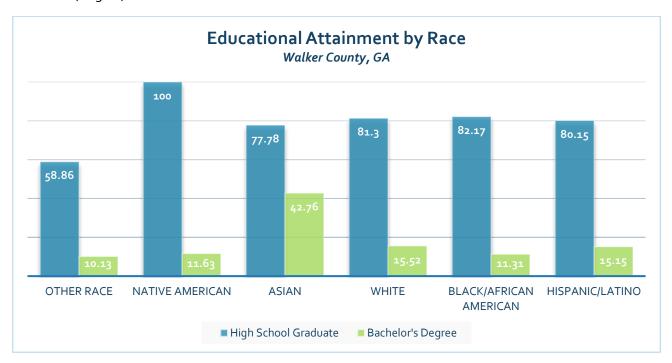

Walker County Educational Attainment Breakdown by Sex and Race (Over 25)

There are some differences between educational attainment rates for males and females in Walker County. High school graduate rate is 40% in males compared to 34.4% in females while Associates degree rate is higher in females. Graduate degree or above rate is 5.6% in males compared to 4.7% in females.

Source: U.S Census Bureau, 2013-2017 American Community Survey 5-Year Estimates

The highest rate of High School graduation is among Native Americans followed by Black/African American (82.17%), White (81.3%) and Hispanics at 80.15%. The Bachelor's Degree rate is highest among Asians (42.76%), while the rates are considerably low in White (15.52%), Hispanics (15.15%) and Black/African American (11.31%).

Source: U.S Census Bureau, 2013-2017 American Community Survey 5-Year Estimates

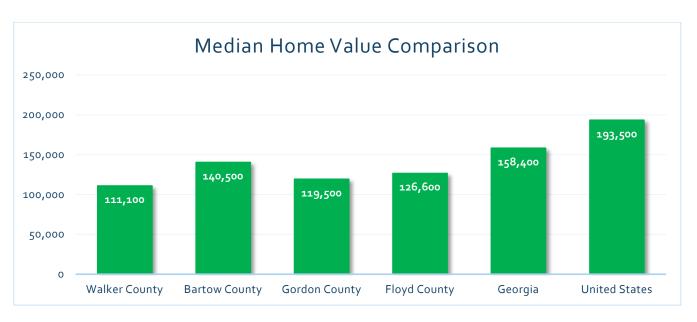

Walker County Poverty Breakdown by Educational Attainment Level

Research has shown that educational attainment and poverty rates are inversely related. In Walker County, 25.89% of those without a high school diploma or GED live in poverty, compared to 11.24% of those with some College or Associates degree and 7.26% of those with Bachelor's degree or higher.

Housing

Median Home Value

The Median home value for Walker county is \$111,100; less than the surrounding counties which are closer to the Metro Atlanta area (these counties were chosen for comparison due to similar demographics and their proximity). United States Median Home Value is \$193,500 while for the state of GA the value is \$158,400.

Source: U.S Census Bureau, 2013-2017 American Community Survey 5-Year Estimates

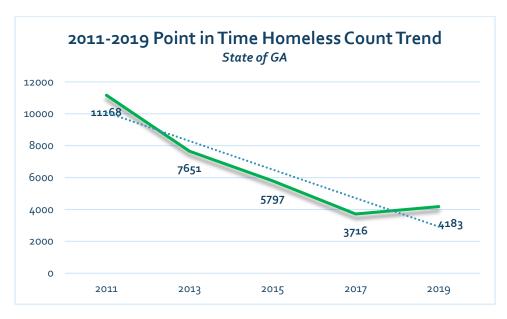

Homeless Population

Georgia Point in Time gathers homeless data and provides counts for homeless persons in the county. The main limitation of this data is that it is collected as a one-time count on a given time and day and published every 2 years, hence it might not be a true picture of homelessness in the community. Walker County's homeless population increased from 42 Total Homeless Persons (THP) in 2017 Count to 49 THP during the 2019 Count. The graph below the table shows the trends over the past few years in the state of GA and might give a better estimate of the homelessness situation in the state.

	Unsheltered Homeless Persons (Counts and Predictive Model)	Sheltered Homeless Persons (Emergency and Transitional Housing)	Total Homeless Persons
Walker County	29	20	49
State of GA	2262	1921	4183

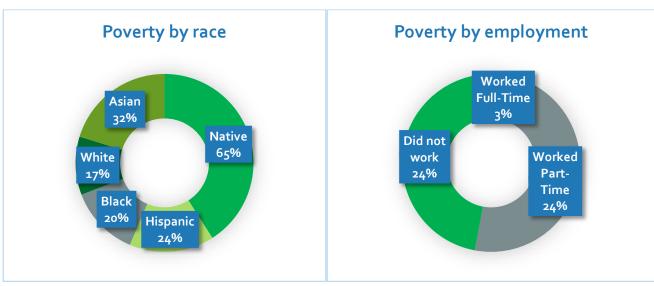

Source: GA Point in Time (2019)

Poverty

The poverty data uses the federal poverty thresholds for the purpose of this report. Overall 17.7% of the population lives below the poverty level in Walker County. According to the ACS (2013-2017), an estimated 24.4% of children under the age of 18 and 8.4% of seniors above 65 years of age, live below the poverty threshold. The race most likely to live in poverty is Natives (65%), followed by Asian (32%), Hispanics (24%), Black/African American (20%) and then White (17%).

Source: U.S Census Bureau, 2013-2017 American Community Survey 5-Year Estimates

Children living in Poverty

Children in Poverty captures an upstream measure of poverty that assesses both current and future health risk. While repercussions resulting from poverty are present at all ages, children in poverty may experience lasting effects on academic achievement, health, and income into adulthood. Low-income children have an

increased risk of injuries from accidents and physical abuse and are susceptible to more frequent and severe chronic conditions and their complications such as asthma, obesity, diabetes, ADHD, behavior disorders, and anxiety than children living in high income households.

% Children in Poverty	24%
% Children in Poverty (Black)	46%
% Children in Poverty (Hispanic)	29%
% Children in Poverty (White)	23%

Children Eligible for free or reduced-price lunch

Food insecurity and hunger are known to impair child development and increase risk of poor health outcomes. The National School Lunch Program leads to substantial reductions in childhood food insecurity, poor health, and obesity. Under the National School Lunch Act, eligible children (based on family size and income) receive adequate nutrition to help support development and a healthy lifestyle. In addition, eligibility for free or

reduced-price lunch is a useful indicator of family poverty and its effect on children. When combined with poverty data, this measure can also be used to identify gaps in eligibility and enrollment. In Walker County Public Schools, 64% of the students are eligible for a free or reduced-price lunch. The percentage for the state of Georgia is 62%.

Healthcare Access

Health Insurance Coverage

Lack of health insurance coverage is a significant barrier to accessing needed health care. One key finding from the Kaiser Family Foundation report on access to healthcare is that, "Going without coverage can have serious health consequences for the uninsured because they receive less preventative care, and delayed care often results in serious illness or other health problems".

Between 2015 and 2017, the percent of uninsured citizens in Walker County, GA declined by 1.5% from 15.8% to 14.3% which is comparable to Georgia but more than United States rate of 10.5%. The percentage of employed civilian labor force population (19-64) who are uninsured is 17.1% while unemployed who are uninsured is 47.2% which signifies a direct link between employment and better healthcare access.

Source: U.S. Census Bureau – American Community Survey (2013-2017)

Healthcare Providers

Access to care requires not only insurance coverage, but also access to healthcare providers. Sufficient availability of primary care physicians is essential for preventive and primary care, and, when needed, referrals to appropriate specialty care.

Primary Care Physicians is the ratio of the population to primary care physicians. The ratio represents the number of individuals served by one physician in a county, if the population was equally distributed across physicians.

Chronic Diseases

According to the Centers for Disease Control (CDC), six in ten Americans live with at least one chronic disease, like heart disease, cancer, stroke, or diabetes. These and other chronic diseases are the leading causes of death and disability in America, and they are also a leading driver of health care costs. But the good news is that most chronic diseases can be prevented by eating well, being physically active, avoiding tobacco and excessive drinking, and getting regular health screenings.

Major Risk Factors for Chronic Diseases

Smoking

Tobacco use is the leading cause of preventable disease, disability, and death in the United States. About 34 million US adults smoke cigarettes, and 58 million nonsmokers are exposed to secondhand smoke. Adult Smoking is the percentage of the adult population in a county who both report that they currently smoke every day or most days and have smoked at least 100 cigarettes in their lifetime.

Walker County percentage smokers – 19%

Overall Georgia percentage smokers – 18%

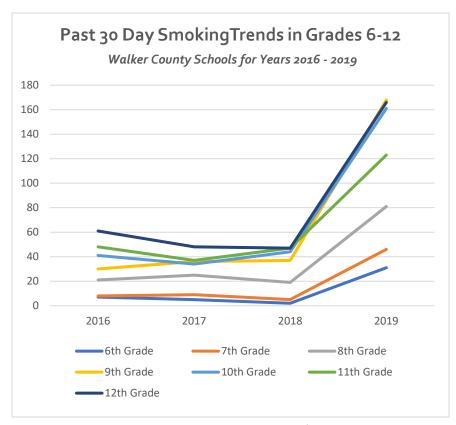

Top U.S. performers percentage smokers - 14%

Source: County Health Rankings (2017)

Youth and Tobacco Use

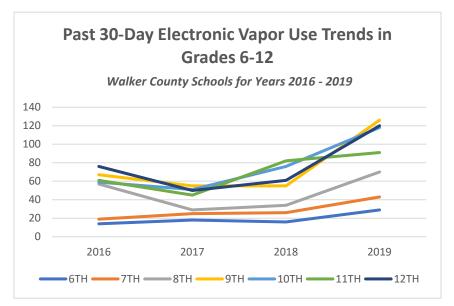

According to the Department of Health and Human Services, if cigarette smoking continues at the current rate among youth in this country, 5.6 million of today's Americans younger than 18 will die early from a smoking-related illness. That's about 1 of every 13 Americans aged 17 years or younger who are alive today.

Tobacco product use is started and established primarily during adolescence and nearly 9 out of 10 cigarette smokers first try cigarette smoking by age 18. Each day in the U.S. about 2,000 youth under 18 years of age smoke their first cigarette and more than 300 youth under 18 years of age become daily cigarette smokers.

Source: GA Department of Education (2016-2019)

To make matters worse, recent increases in the use of e-cigarettes is driving increases in tobacco product use among youth, which are often available in multiple flavorings to make them even more appealing to the younger crowd. In Walker county, the use of Electronic Vaping trend is on the rise among the youth. The steadily climbing rates from children in grades 6-12 is shown in the graph below:

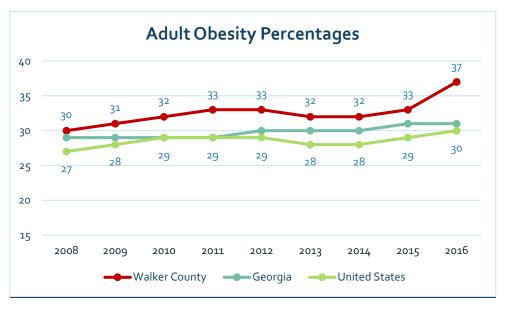

Source: GA Department of Education (2016-2019)

Obesity

Obesity is defined as weight that is higher than what is considered as a healthy weight for a given height. Body Mass Index, or BMI, is used as a screening tool for overweight or obesity.

Obesity is a complex health issue since it results from a combination of causes and contributing factors, including individual factors such as behavior and genetics. Behaviors can include dietary patterns, physical activity, inactivity, medication use, and other exposures. Additional contributing factors in our society include the food and physical activity environment, education and skills, and food marketing and promotion. Obesity is a serious concern because it is associated with poorer mental health outcomes, reduced quality of life, and the leading causes of death in the U.S. and worldwide, including diabetes, heart disease, stroke, and some types of cancer.

Walker County 37%

Source: CDC NCCD Database (2008-2016)

Food Insecurity

The Food Environment Index ranges from 0 (worst) to 10 (best) and equally weights two indicators of the food environment:

- 1) Limited access to healthy foods estimates the percentage of the population that is low income and does not live close to a grocery store. "Low income" is defined as having an annual family income of less than or equal to 200 percent of the federal poverty threshold for the family size. Living close to a grocery store is defined differently in rural and nonrural areas; in rural areas, it means living less than 10 miles from a grocery store whereas in nonrural areas, it means less than 1 mile. In Walker county 14% of the population has limited access to healthy foods.
- 2) Food insecurity estimates the percentage of the population that did not have access to a reliable source of food during the past year. It is influenced by a number of factors including income, employment, race/ethnicity and disability. In Walker county 13% of the population was food insecure in 2016.

	Limited Access to Healthy Foods	Food Insecurity

Physical Inactivity

Access to Exercise Opportunities measures the percentage of individuals in a county who live reasonably close to a location for physical activity. Locations for physical activity are defined as parks or recreational facilities. Parks include local, state, and national parks. Recreational facilities include YMCAs as well as include a wide variety of facilities including gyms, community centers, dance studios and pools. Individuals who:

- reside in a census block within a half mile of a park or
- in urban census blocks: reside within one mile of a recreational facility or
- in rural census blocks: reside within three miles of a recreational facility

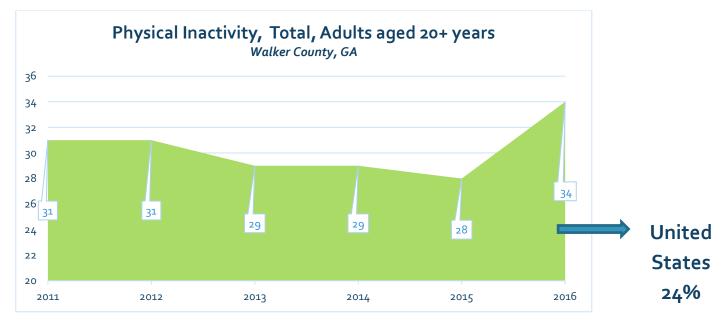

are considered to have adequate access for opportunities for physical activity.

Walker County Population with Adequate Access – 59%

Source: CDC Wonder database (2016)

Even though 59% of the population has adequate access to places for physical activity, the rates of physical inactivity, are worsening compared to the state of GA and USA. In 2016, 34% of Walker county adults were not active in their leisure time, compared to 24% nationwide.

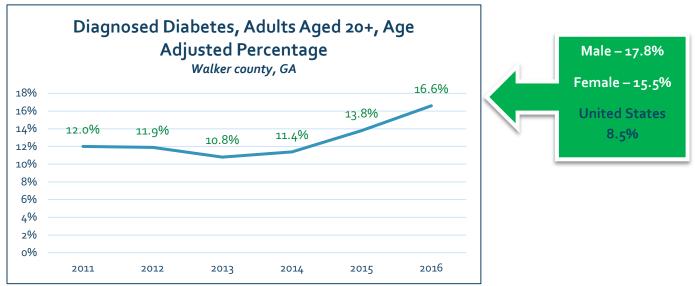

Source: CDC Behavioral Risk Factor Surveillance System

Diabetes

More than 100 million Americans nationwide are living with diabetes (30.3 million) or prediabetes (84.1 million), according to the CDC. It is the 7^{th} leading cause of death in the United States.

Diabetes is a life-long disease and can not only cause complications of its own but is also a risk factor for other chronic conditions, such as kidney disease, heart disease and mental health issues. Although it is non-curable, the good news is that the risk of most diabetes-related complications can be reduced by keeping blood pressure, blood glucose and cholesterol levels within recommended range. Also, being a healthy weight, eating healthily, reducing alcohol intake, and not smoking help reduce the risk.

An estimated 16.6% of Walker County residents 20 years or older had ever received a Diabetes diagnosis. Health disparities exist in the prevalence of Diabetes according to age and race. The prevalence is more for Males in Walker county and it is the 10th leading cause of death among all races living in the county.

Source: CDC- United Stated Diabetes Surveillance System (2011-2016)

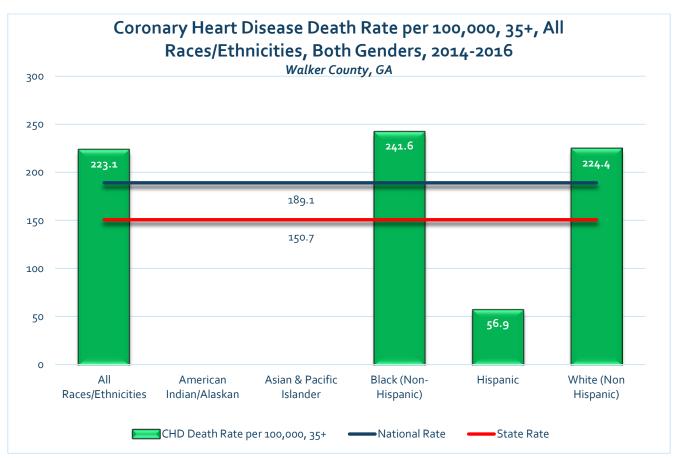

Heart Disease

The term "heart disease" refers to several types of heart conditions. The most common type of heart disease in the United States is coronary artery disease, which affects the blood flow to the heart. Decreased blood flow can cause a heart attack. High blood pressure, high cholesterol, and smoking are key risk factors for heart disease. According to the CDC, about half of Americans (47%) have at least one of these three risk factors. Several other medical conditions and lifestyle choices can also put people at a higher risk for heart disease, including:

- Diabetes
- Overweight and obesity
- Poor diet
- Physical inactivity
- Excessive alcohol use

About 610,000 people die of heart disease in the United States every year—that's 1 in every 4 deaths. It is the leading cause of death in the state, Walker County and nationwide for all ages as well as across two major races; Whites and Black/African Americans.

In Walker County, Black/African Americans are affected more with coronary heart disease than any other race. The death rate per 100,000 population in Whites and Blacks is above the overall national and the overall state rate. Among other races, the reason for low numbers can be because data is limited due to under reporting and failure to seek medical care, as the data source for this graph is hospital data collected from all counties. Thus, the overall numbers of people living with heart disease in Walker County will be even higher than depicted in the chart below.

Source: CDC Interactive Atlas of Heart Disease and Stroke (2014-16)

Hypertension

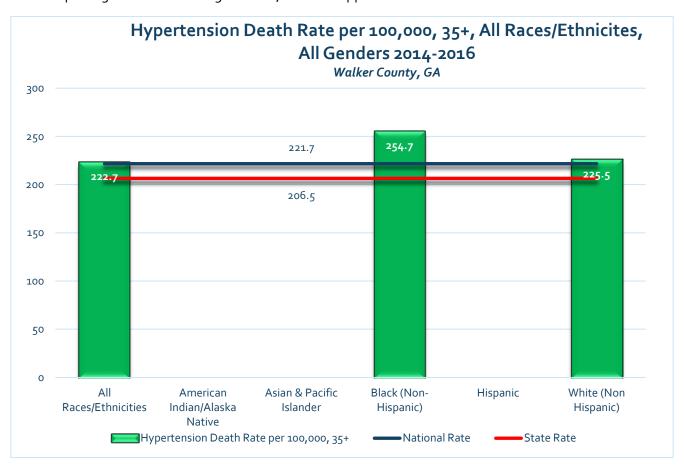

Hypertension is another name for high blood pressure. It can lead to severe complications and increases the risk of heart disease, stroke, and death.

While blood pressure is best regulated through diet before it reaches the stage of hypertension, there is a range of treatment options. However, lifestyle adjustments are the standard first-line treatment for hypertension, and they include:

Regular physical exercise

- Stress reduction
- Using alcohol, drugs, smoking, and unhealthy eating to cope with stress will add to hypertensive problems. These should be avoided.
- Smoking can raise blood pressure. Giving up smoking reduces the risk of hypertension, heart conditions, and other health issues.

There is limited data available on county wide prevalence of Hypertension since many individuals have high blood pressure and might not even know it. The chart below shows the death rates per 100,000 population due to Hypertension, according to race. Certain disparities exist among races in terms of Hypertension. Black/African Americans are affected more than any other race in state and national comparisons, and for this population, it is the 6nd leading cause of death in Walker County compared to Whites, where it stands as the 8th leading cause of death. Hispanic population is also affected disproportionately by Hypertension, however due to reporting limitations among this race, the rates appear to be low in the chart illustrated below:

Source: CDC Interactive Atlas of Heart Disease and Stroke (2014-16)

Stroke

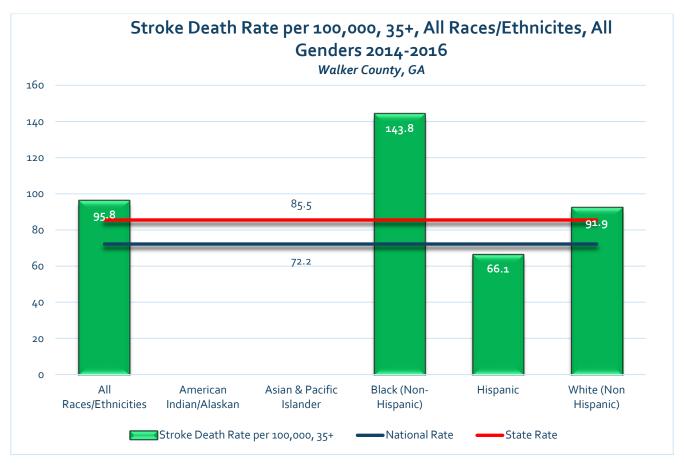

Stroke is the fifth leading cause of death in the United States according to the CDC and is a major cause of serious disability for adults. Stroke is preventable. You may be able to prevent stroke or lower your chances of having a stroke. Although anyone can have a stroke, certain risk factors increase the chance of having a stroke such as:

- Chronic diseases (High blood pressure, Heart Disease, Diabetes)
- Health behaviors (Unhealthy diet, physical inactivity, Obesity, High Cholesterol)
- Previous History of a Stroke or Transient Ischemic Attack (TIA)
- Excessive Tobacco and Alcohol use
- Family History
- Sex and Race
 - o Women are more prone
 - o Black/African Americans, Hispanics, American Indians

There are 3 major types of strokes, all of which are influenced by the factors mentioned above:

- 1. Ischemic Stroke
- 2. Hemorrhagic Stroke
- 3. Transient Ischemic Attack (TIA)

In Walker County, the Stroke death rate per 100,000 population shows marked racial disparities among Black/African Americans and Whites. Blacks are more likely to die of a stroke compared to Whites and the age adjusted death rate for Blacks is twice that for the state and national overall rate. Whites are also above the overall state and national rates, showing significant mortality due to this condition.

Asthma

Asthma is a disease that affects the lungs. It is one of the most common long-term diseases of children, but adults also have asthma, too. According to the CDC, asthma attacks account for 1.7 million ED visits yearly, making it one of the top 20 reasons for ED visits. An estimated 8.4% of individuals in the state of GA live with Asthma.

Childhood Asthma

Among school aged children, Asthma is the leading cause of school absenteeism and is one of the most common chronic pediatric diseases. Patients with asthma often present to the emergency department for treatment for acute episodes. These patients may not have a primary care physician or primary care home, and thus are seeking care in the emergency department. The following table shows the ER visit rates in 2018 in Walker County due to asthma related complications among children (0-17 years):

Source: cdc.gov

	2018 ER Visit Rate
Georgia	985.7
Walker County	133.3

Source: OASIS (2018)

Cancer

Cancer is a group of diseases involving abnormal cell growth with the potential to invade or spread to other parts of the body. There are more than 100 types of cancers, some more common than others. There are many causes of cancer, and some are preventable. For example, over 480,000 people die in the U.S. each year from smoking cigarettes, according to data reported in 2014 by the CDC. In addition to smoking, risk factors for cancer include:

- Heavy alcohol consumption
- Excess body weight
- Physical inactivity
- Poor nutrition

Other causes of cancer are not preventable. Currently, the most significant unpreventable risk factor is age. According to the American Cancer Society, doctors in the U.S. diagnose 87 percent of cancer cases in people ages 50 years or older.

Death Rates According to Type

The most common type of cancer in Walker County is lung cancer with a rate of 93.6, followed by pancreatic cancer, colon cancer and breast cancer.

Cancer Type	Death Rate per 100,000 Population (Walker County)
Lung Cancer	93.6
Pancreatic Cancer	15.8
Colon Cancer	14.4
Breast Cancer	13.0
Liver Cancer	10.1
Prostate Cancer	7.2
Ovarian Cancer	7.2
Throat Cancer	7.2

Racial Disparities Among Chronic Disease

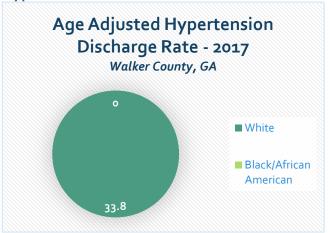

Heart disease, Stroke, Cancer, Diabetes, and Hypertension are among the most common, costly and preventable of all health problems. Many of these conditions disproportionately affect health disparity populations and are influenced by where people live, work and play. This holds importance because, only the interventions that consider this complex interaction between an individual and its surroundings, can help eliminate these disparities and better enhance chronic disease control and prevention.

In Walker County, Black/African Americans are affected disproportionally by certain chronic conditions such as Diabetes, Hypertension, Heart Disease and Stroke, thus highlighting the need of early detection and intervention as well as tailored approaches to manage these conditions. The following charts highlight some of these disparities. However, due to limited data availability, the numbers for Hypertension, Diabetes and Stroke could not be compared.

Mental Health

Poor Mental Health Days is based on survey responses to the question: "Thinking about your mental health, which includes stress, depression, and problems with emotions, for how many days during the past 30 days was your mental health not good?" The value reported in the County Health Rankings is the average number of days a county's adult respondents report that their mental health was not good. The measure is ageadjusted to the 2000 US population. Reliability for the healthy days measures in the Behavioral Risk Factor Surveillance System is high. In addition, a study examining the validity of healthy days as a summary measure for county health status found that counties with more unhealthy days were likely to have higher unemployment, poverty, percentage of adults who did not complete high school, mortality rates, and prevalence of disability than counties with fewer unhealthy days.

Walker Mentally Unhealthy Days - 4.1

Overall in GA - 3.8

Top U.S. performers - 3.1

Suicide

In Walker County there were 8 deaths by Suicide for the year 2017 and 10 deaths for the year 2018. Of these 10 suicide deaths, 8 were White Males, 1 was White Female and one was Black/African American.

In 2018 in Walker County, there were

10 Suicide Deaths

AND

44 Emergency Department visits for suicide attempt

Suicide is the 5th leading cause of death among premature deaths in Walker County among all races. Nationwide suicide is fast becoming a major public health concern. Over 40,000 people die by suicide each year in the United States; it is the 10th leading cause of death overall.

Substance Use and Abuse

Excessive Drinking

Excessive drinking is a risk factor for a number of adverse health outcomes, such as alcohol poisoning, hypertension, acute myocardial infarction, sexually transmitted infections, unintended pregnancy, fetal alcohol syndrome, sudden infant death syndrome, suicide, interpersonal violence, and motor vehicle crashes according to a report published by CDC. It is the third leading lifestyle-related cause of death in the United States.

Excessive Drinking is the percentage of adults that report either binge drinking, defined as consuming more than 4 (women) or 5 (men) alcoholic beverages on a single occasion in the past 30 days, or heavy drinking, defined as drinking more than one (women) or 2 (men) drinks per day on average. Walker county is at 16% compared to GA rate of 15% and U.S.A at 23%.

Overall GA - 15%

Walker county - 16%

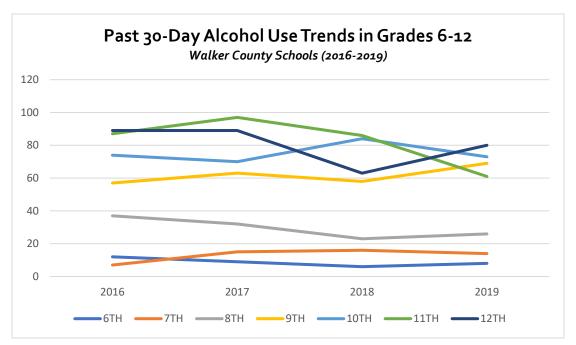

United States - 23%

Alcohol in Youth

The age of onset of alcohol use in Walker county has declined from 13.21 in 2014 to 12.35 in 2017. Underage drinking is dangerous, not only for the drinker but also for society, as evident by the number of alcohol-involved motor vehicle crashes, homicides, suicides, and other injuries. People who begin drinking early in life run the risk of developing serious alcohol problems, including alcoholism, later in life. They also are at greater risk for a variety of adverse consequences, including risky sexual activity and poor performance in school.

Walker County past 30 day use of alcohol showed a steady climbing trend among grades 6-12 in Walker county schools, however the trends seem to be going downward for grades 10th and 11th for the past 01 year. The overall trend points towards the growing problem of alcohol and substance abuse particularly among the youth.

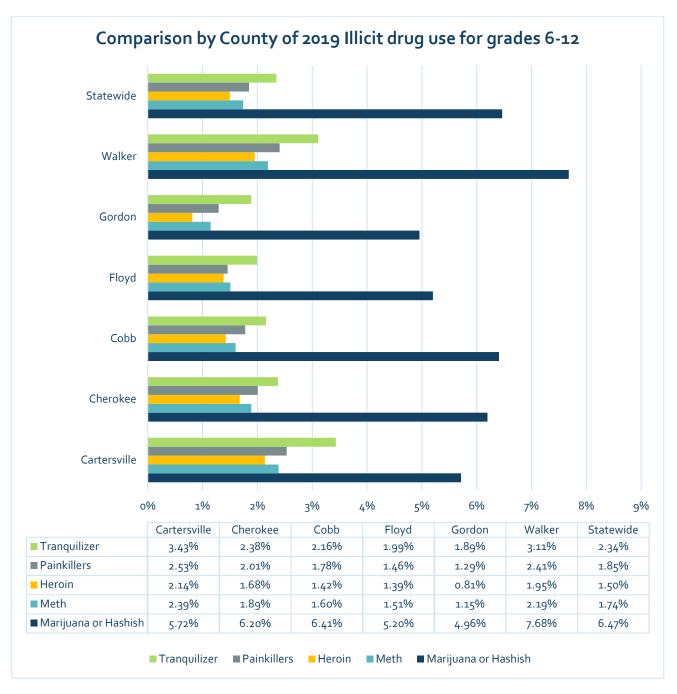

Source: Georgia Department of Education (2014-2018)

Illicit Drug Use

Drug Use Among Youth

The following table illustrates the use of Alcohol, Tobacco, Electronic Vaping and Marijuana among 6-12 graders in Walker County. It also compares adjacent counties as well as state wide data. Walker County's alcohol use and Electronic Vaping use rates are higher than the state and highest among all counties shown especially in terms of using Marijuana (Hashish).

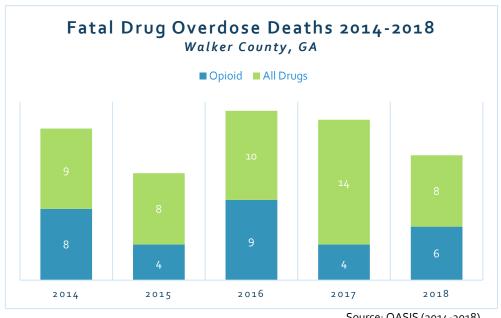

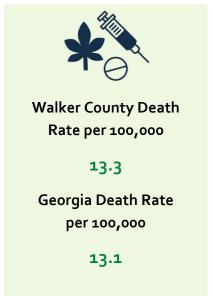

Source: Georgia Department of Education (2014-2018)

Overdose Deaths

Drug overdose deaths are a leading contributor to premature death and are largely preventable. Currently, the United States is experiencing an epidemic of drug overdose deaths. Since 2000, the rate of drug overdose deaths has increased by 137 percent nationwide. Opioids contribute largely to drug overdose deaths; since 2000, there has been a 200 percent increase in deaths involving opioids (opioid pain relievers and heroin).

In Walker County, there were a total of 8 deaths due to overdose in the year 2018, and 6 were caused by Opioid only overdose. The overall death rate due to overdoses is 13.3 per 100,000 population in Walker county, compared to 13.1 for the state of Georgia.

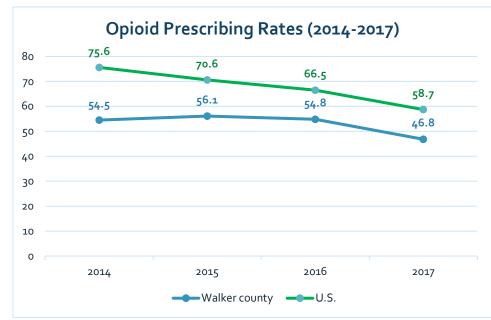

Source: OASIS (2014-2018)

Opioid Prescribing Rates

Prescription opioids are often used to treat chronic and acute pain and, when used appropriately, can be an important component of treatment. However, serious risks are associated with their use, and it is essential to

understand the risks of using prescription opioids alongside their benefits. These risks include misuse, opioid use disorder (addiction), overdoses, and death.

The Opioid Prescribing Rate is calculated as prescriptions written for every 100 patients. Although Walker County shows a downward trend in the opioid prescription practices, the rates are still very high and in close comparison to the national rates.

Maternal and Child Health

Infants and Children

Infant Mortality Rate

Infant Mortality Rate is defined as the number of all infant deaths (within 1 year), per 1,000 live births. The Healthy People 2020 target for Infant Mortality Rate is 6.0 infant deaths per 1,000 live births. In addition to giving us key information about maternal and infant health, the infant mortality rate is an important marker of the overall health of a society including equitable healthcare access for all and its socio-economic conditions.

Walker County – 7
Overall GA – 7

Source: County Health Rankings 2018

Fetal Mortality Rate

Fetal death refers to the spontaneous intrauterine death of a fetus at any time during pregnancy. Fetal deaths later in pregnancy (at 20 weeks of gestation or more, or 28 weeks or more, for example) are also sometimes referred to as stillbirths. Rate is calculated as number of deaths per 1000 live births.

The fetal mortality rate is considered a good measure of the quality of health care in a country or a medical facility. It is higher in certain ethnic groups and among mothers with health problems during pregnancy, especially if the mother does not receive adequate personal and prenatal health care.

Source: County Health Rankings 2018

Premature Births

A premature birth is one that occurs before the start of the 37th week of pregnancy. Premature babies, especially those born very early, often have complicated medical problems. Typically, complications of prematurity vary. But the earlier your baby is born, the higher the risk of complications.

The Healthy People 2020 target for premature births is 9.4% of live births and Walker County and state of Georgia both leave room for improvement to meet the HP2020 target.

Walker County – 11.1%

Overall GA - 11.5%

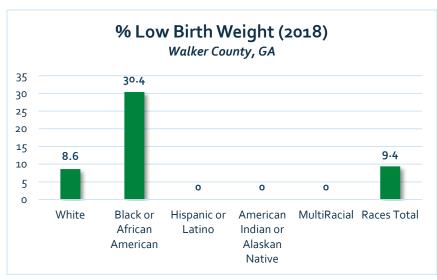

Source: County Health Rankings 2018

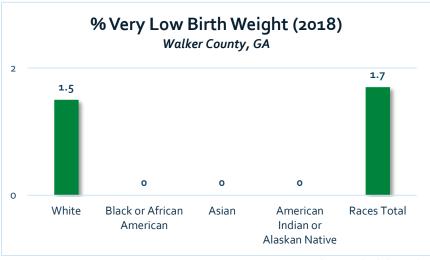

Low Birthweight

Low birthweight is a term used to describe babies who are born weighing less than 2,500 grams (5 pounds, 8 ounces). In contrast, the average newborn weighs about 8 pounds. Several risk factors contribute to Low birth weight babies including race, age, multiple births and mother's health (exposure to illicit drugs, alcohol, and cigarettes, lower socioeconomic status, poorer pregnancy nutrition, inadequate prenatal care, and pregnancy complications).

In Walker County, 9.4% of babies born in 2018 were low birth weight, compared to GA where 10.1% of the babies born were under weight. The Healthy People 2020 target for low birth weight babies is 7.8%.

Certain health disparities among such births can be noted with the help of the following two charts which show an increased rate of low birth weight and very low birth weight babies among Blacks/African Americans compared to White and Hispanics as well as high percentage of low birth weight babies among women who do not graduate high school.

Teen Births

US teen birth rates (births per 1,000 females aged 15 to 19 years) decreased 7% overall from 2016 to 2017. Decreases occurred for teens of most racial groups as well as for Hispanic teens. Despite these declines, racial/ethnic, geographic, and socioeconomic disparities persist.

Less favorable socioeconomic conditions, such as low education and low-income levels of a teen's family, may contribute to high teen birth rates. Evidence suggests teen pregnancy significantly increases the risk of repeat pregnancy and of contracting a sexually transmitted infection (STI), both of which can result in adverse health outcomes for mothers, children, families, and communities.

Teen Birth rate is calculated as number of births to females ages 15-19 per 1,000 females in a county. The Walker County rate for teen births is higher than the state of Georgia and Whites in Walker County have the highest rate according to race/ethnicity.

Environmental Health

Air Quality

Air quality indices (AQI) are numbers used by government agencies to characterize the quality of the air at a given location. As the AQI increases, an increasingly large percentage of the population is likely to experience increasingly severe adverse health effects.

Walker County air quality - 19

GA average - 20

Source: Environmental Protection Agency (EPA)

This is based on new measures of hazardous air pollutants from the EPA, called the National Air Toxics Assessment. This analysis model's respiratory illness and cancer risk down to the zip code level, providing better detail and insight than the previous analysis based solely on results from air monitoring stations.

Hazardous Chemicals

Lead Poisoning

Lead poisoning occurs when lead builds up in the body, often over months or years. Even small amounts of lead can cause serious health problems. Lead-based paint and lead-contaminated dust in older buildings are the most common sources of lead poisoning in children. Other sources include contaminated air, water and soil. Adults who work with batteries, do home renovations or work in auto repair shops also might be exposed to lead.

Lead-based paints for homes, children's toys and household furniture have been banned in the United States since 1978. But lead-based paint is still on walls and woodwork in many older homes and apartments. Most lead poisoning in children results from eating chips of deteriorating lead-based paint.

Number of Houses Built before 1978 (Walker County) - Approx. 16,212.

(Source – U.S. Census Bureau 2017)

Children younger than 6 years are especially vulnerable to lead poisoning, which can severely affect mental and physical development. At very high levels, lead poisoning can be fatal.

Infectious Diseases

HIV/AIDS and Sexually Transmitted Diseases

HIV stands for Human Immunodeficiency Virus. It weakens a person's immune system by destroying important cells that fight disease and infection. No effective cure exists for HIV, but with proper medical care, HIV can be controlled. Some groups of people in the United States are more likely to get HIV than others because of many factors, including their sex partners, their risk behaviors, and where they live.

In Walker County, there were 5 new cases of HIV diagnosis in 2017, taking the total number of persons living with HIV (PLWH) to 72, irrespective of their stage of disease (HIV virus or AIDS).

Syphilis: Primary and Secondary

Syphilis is a sexually transmitted infection that can cause serious health problems if it is not treated. Syphilis is divided into stages (primary, secondary, latent, and tertiary), each with different signs and symptoms and its own set of complications. It is a highly contagious disease spread primarily by sexual activity and although this disease is spread from sores, most of the sores go unrecognized. The infected person is often unaware of the disease and unknowingly passes it on to his or her sexual partner. Pregnant women with the disease can spread it to their baby and this disease, called congenital syphilis, can cause abnormalities or even death to the child.

In the latest data from Walker County, o cases of Syphilis were reported compared to 4,970 cases reported in the state of GA.

Gonorrhea

Gonorrhea is a sexually transmitted disease (STD) that can infect both men and women. It can cause infections in the genitals, rectum, and throat. It is a very common infection, especially among young people ages 15-24 years.

In Walker County 79 cases of Gonorrhea were reported in 2018. The age adjusted rate for Gonorrhea is 133.3 for Walker County which is lower than state of GA rate.

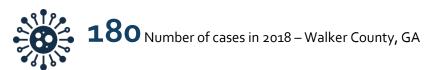

Black/African Americans are affected disproportionately by this infection and are 4 times more likely to get infected.

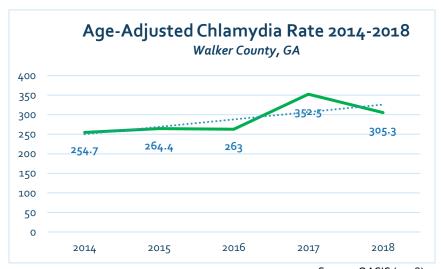

Source: OASIS (2018)

Chlamydia

Chlamydia, caused by infection with Chlamydia trachomatis, is the most common notifiable disease in the United States. It can affect both men and women but in women untreated infection can result in serious, permanent damage to a woman's reproductive system. This can make it difficult or impossible for her to get pregnant later on.

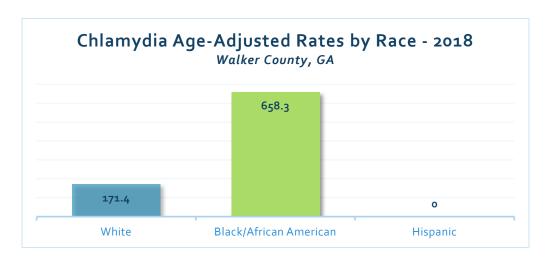

Chlamydia age adjusted rate per 100,000 population in Walker County is 305.3 for 2018, lower than Georgia overall rate of 617.5 and United States rate of 529. However, within Walker County, the trend line shows a steady increase in the number of Chlamydia cases in the past 5 years.

Source: OASIS (2018)

Disparities continue to persist in rates of STDs among some racial minorities especially the Black/African American population. In terms of Chlamydia Blacks are affected 4 times as much as Whites and Hispanic population.

Source: OASIS (2018)

Death, Illness and Injury

Unintentional and Intentional Causes of Death

Total life expectancy has two fundamental determinants: total disease and injury mortality rates. The 5 leading external causes of injury deaths comprise 3 unintentional (motor vehicle traffic crashes, poisoning, and falls) and 2 intentional (suicide and homicide) or violence-related categories.

The overarching categories within Unintentional and Intentional Injury are summarized below for Walker County:

Unintentional Injury Mechanism	No. of Deaths - 2018
Poisoning	7
Motor Vehicle Crashes	17
Falls	7
Drowning	1
All other Unintentional Injury	3
Suffocation	3
Accidental Shooting	0

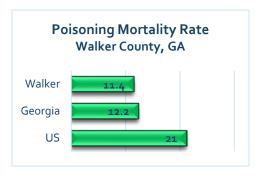

Intentional Injury Mechanism	No. of Deaths - 2017
Suicide	10
Homicide	3
	Source: OASIS (2018)

Poisoning

Age Adjusted Mortality Rate/Emergency Room Visits

There were 7 deaths due to Poisoning in Walker County in 2018. The age adjusted death rate was 11.4, lower than the state and national rate. The Emergency Room (ER) visit rate was higher than that of the state.

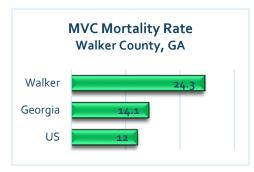

Source: OASIS (2018)

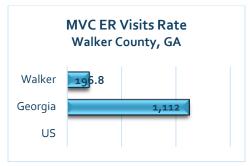

Motor Vehicle Accidents

Age Adjusted Mortality Rate/Emergency Room visits

There were 17 deaths due to Motor Vehicle crashes in Walker County in 2018. The age adjusted death rate was 24.3, higher than state and national rate but the Emergency Room (ER) visit rate was lower than that of Georgia.

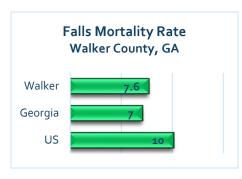

Source: OASIS (2018)

Falls

Age Adjusted Mortality Rate/Emergency Room visits

There were 6 deaths due to falling in Walker County in 2017. The age adjusted death rate was 7.6, higher than state but lower than national rate. The Emergency Room (ER) visit rate was also lower than that of Georgia.

Source: OASIS (2018)

In older adults 65+ the number of deaths by falling in Walker County in 2018 was 78. The ER Visits due to falls were more for 0-64 compared to 65+ older adults.

Source: OASIS (2018)

Violent Crime

Violent crime is composed of four offenses: murder and nonnegligent manslaughter, forcible rape, robbery, and aggravated assault; while property crime includes the offenses of burglary, larceny-theft, motor vehicle theft, and arson. The object of the theft-type offenses is the taking of money or property, but there is no force or threat of force against the victims.

Walker County violent crime rate is 27.9 while the state of GA average is 21.1 and US average is 22.7. Detailed number of crimes according to type for the year 2017 are listed below:

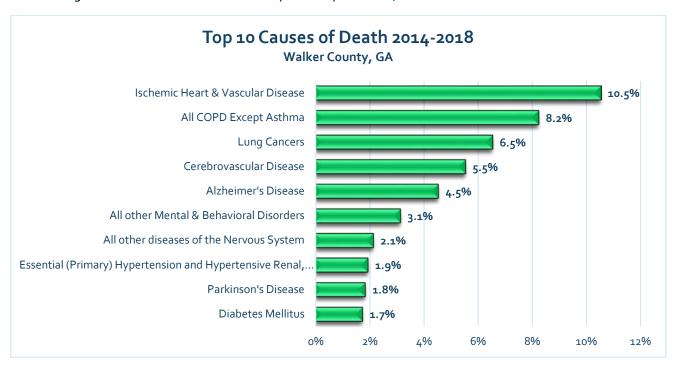

Number of Crimes by Offense

Homicide	Robbery	Assault	Burglary	Larceny
04	24	259	371	1063

Source: Georgia Bureau of Investigation (GBI)

Leading Causes of Death

The leading causes of death in Walker County for the years 2014-2018 are as follows:

Source: OASIS (2018)

State and National Comparison

The most common leading cause of death is Ischemic Heart Disease which is the same across Walker County, state of GA and nationwide. However, Walker County ranks higher in deaths due to Mental and Behavioral Disorders, Diseases of the Nervous System and Parkinson's Disease.

Walker County	State of GA	U.S.A
Ischemic Heart Disease	Ischemic Heart Disease	Ischemic Heart Disease
All COPD Except Asthma	All COPD except Asthma	Cancer
Lung Cancers	Lung Cancers	Unintentional Injuries
Cerebrovascular Disease (Stroke)	Cerebrovascular Disease (Stroke)	Chronic Lower Respiratory Diseases
Alzheimer's Disease	Alzheimer's Disease	Cerebrovascular Disease (Stroke)
All other Mental & Behavioral Disorders	Hypertension and Hypertensive Diseases	Alzheimer's Disease
All other Diseases of the Nervous System	All other Mental & Behavioral Disorders	Diabetes Mellitus
Hypertension and Hypertensive Diseases	Diabetes Mellitus	Influenza & Pneumonia
Parkinson's Disease	All other Diseases of the Nervous System	Kidney Disease
Diabetes Mellitus	Kidney Diseases	Suicide

Source: OASIS (2018)

Leading Cause of Death according to Race

Due to data limitation and low reporting numbers for Blacks/African Americans only the top 6 causes of deaths are available. But across race, several notable differences exist between the top causes of death in Walker County:

- **Hypertension** is the 6th leading cause of death among Black/African Americans while it is the 8th leading cause of death among white population.
- **Cerebrovascular Disease** is in the top cause of death for blacks but is the 4th leading cause among whites.
- Malignant Neoplasm of the Pancreas is the 5th leading cause of death among Black/African Americans in Walker County while it is not one of the top 10 leading causes of death in Whites.

Premature Death Rates

Premature Death rates are defined as Years of potential life lost (YPPL) before age 75 per 100,000 population (age-adjusted). The leading causes of premature death rate in Walker County are listed below:

- 1) Ischemic Heart and Vascular Disease
 - 2) Lung Cancers
- 3) Accidental poisoning & Exposure to Noxious Substances
 - 4) All COPD Except Asthma
 - 5) Intentional Self-Harm (Suicide)
 - 6) Motor Vehicle Crashes
 - 7) Cerebrovascular Disease (Stroke)
 - 8) Certain conditions originating in the Perinatal Period
 - 9) All other diseases of the Nervous System
 - 10) Breast Cancers

Forces of Change Assessment

The Forces of Change Assessment (FOCA) is an integral part of the MAPP process and helps the community to answer the following two questions:

- 1. What is occurring or might occur that affects the health of our community or the local public health system?
- 2. What specific threats or opportunities are created by these occurrences?

The Forces of Change can be divided into three broad categories:

Trends are patterns over time, such as migration in and out of a community or a growing disillusionment with government.

Factors are discrete elements, such as a community's large ethnic population, an urban setting, or the jurisdiction's proximity to a major waterway.

Events are one-time occurrences, such as a hospital closure, a natural disaster, or the passage of new legislation.

The Process

The Forces of Change assessment was conducted on March 6^{th} , 2019 at the Walker County Library. The assessment took place over a 3-hour session where the MAPP steering committee and other cross-sector stakeholders from the community came together to identify forces such as trends, factors, or events that are or will be influencing the health and quality of life in Walker County.

The process consisted of an initial presentation, where the participants were given an overview of the MAPP and the FOCA process. The presentation was followed by a brainstorming session where all participants engaged in a discussion to carry out a SWOT analysis of the community. The process was facilitated, which resulted in a comprehensive but focused list of Strengths, Weaknesses, Opportunities and Threats.

After the SWOT analysis the participants were asked to get into their smaller groups and complete the Forces of Change worksheet. The participants were encouraged to keep in mind, the eight categories of forces, namely: **economic, environmental, ethical, legal, political, scientific, social and technological**. They were provided with examples from each of these categories to help consider a broad range of issues as well as the following list of questions to help facilitate their discussion:

- What has occurred recently that may affect our local public health system or community?
- What may occur in the future?
- Are there any trends occurring that will have an impact? Describe the trends.
- What forces are occurring locally? Regionally? Nationally? Globally?
- What characteristics of our jurisdiction or state may pose an opportunity or threat?
- What may occur or has occurred that may pose a barrier to achieving the shared vision?

Each group started off by compiling a comprehensive list of Forces, which was then narrowed down according to common themes. Each force on the resulting list was then discussed further in detail and the associated threats and opportunities for the community and the local public health system, were identified.

SWOT Analysis

INTERNAL FACTORS

STRENGTHS

- Sense of Community
- Good School System
- Colleges (Higher Institutions of learning)
- Parks & Recreation
- Strong Faith Community
- **Active Community Groups**
- Leadership
- Primary Healthcare
- Small Community Size

WEAKNESSES

- Affordable Housing
- Lack of Public Transportation
- Mental Health Services (Lack of Psychiatrists)
- Substance Abuse
- **Unchanging Mindset**
- Too many Foster Children
- Poverty
- Walkability (Lack of Sidewalks)
- High Rate of Chronic Diseases
- Lack of Higher Education
- Crime Rate

EXTERNAL FACTORS

OPPORTUNITIES

- Geography and Size
- **Higher Education Opportunities**
- Create Meaningful Partnerships
- Low Cost of Living
- **Increasing Job Opportunities**
- Community Engagement/Communication
- **Natural Resources**
- Inexpensive Real Estate
- New Leadership
- Access to Outdoor Activities

THREATS

- **Opioid Crisis**
- Lack of Mental Health Services
- Crime
- Lower Economic Status of Residents
- Wages
- **Transient Communities**
- Homelessness
- **Cultural Isolation**
- Shortage of Housing
- Lack of Apathy
- Fear of Change

ANALYSIS SUMMARY

The participants believed that Walker County is a strong close-knit community with great potential for improvement in terms of jobs/economy, higher education and housing opportunities within the community. It is however threatened by the worsening drugs/opioid crisis, high chronic disease rates, lack of communication/collaboration, cultural isolation and overall unwillingness to embrace change which leads to cultural isolation and the community being unable to come up with a solution using the limited resources that are available.

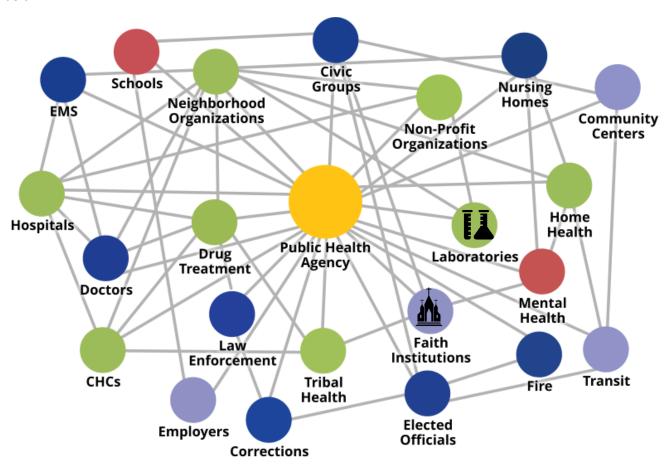

Forces of Change

	Homelessness	Threats posed – Misuse of resources, economic impact, healthcare issues, crime, increased frequency of mental health issues.	Opportunities – Collaboration opportunities, improved services, education and awareness.
	Substance Abuse	Threats posed – Addiction, lack of productivity, attract less skilled workforce, lack of access to treatment, economic impact, safety is compromised, domestic violence, broken family structure.	Opportunities – Increased awareness, expand existing partners, community outreach/support, policy updates, grant/funding opportunities.
*	Hepatitis A Outbreak	Threats posed – Public health threat, I/V drug use, health disparities.	Opportunities- Inter agency partnerships, reach high risk population, education/outreach.
(Mental Health	Threats posed – Lack of professionals, inability to obtain adequate resources, increased crime rate, loss of productivity, stigma.	Opportunities – Early intervention, education and awareness and cultural shift. Peer-support networks and need for skilled mental health professionals, funding/grants.
	Transportation	Threats posed – Access to resources, inability to seek healthcare and employment, risky behaviors, safety issues.	Opportunities – Affordable options, employment, transit system improvements, taxi service/uber, economic growth, child friendly.
	Individual Behaviors	Threats posed – Lack of willingness to change/embrace change, sense of entitlement, loss of productivity, declining healthcare, intergenerational impact.	Opportunities – Increase communication, inclusion, cultural fairs, youth outreach, partnerships with faith community and schools.
	Health Behaviors	Threats posed – Burden on healthcare/economics, decreased quality of life, food deserts, reduced overall quality of life and culture passed onto next generation.	Opportunities – Recreational/outdoor activities, increase awareness and early intervention opportunities, publicity, use of social media/new technology.

Local Public Health System Assessment

Overview

The objectives of the Local Public Health System Assessment (LPHSA) community meeting were to understand the role of the local public health system and gain understanding on how well the Walker County public health system is performing against optimal standards for delivery of the essential health services. The Assessment addresses the activities of all public, private and voluntary entities that contribute to public health within the community, and together make up the Local Public Health System, as illustrated in the diagram below:

Assessment Tool

The Local Public Health System Assessment (LPHSA) is completed using the assessment tool from the National Public Health Performance Standards Program (NPHPSP). The assessment tool was developed and updated under the leadership of the National Association of County and City Health Officials (NACCHO) and the Center for Disease Control and Prevention, along with seven other national partners, and guides state and local jurisdictions in evaluating their current performance against a set of optimal standards.

The 10 Essential Public Health Services (Essential Services) provide the framework for this assessment tool by describing the public health activities that should be undertaken in all local communities. The Performance Standards related to each Essential Service describe an optimal level of performance and capacity to which all

Local Public Health Systems should aspire. Therefore, it can help to identify strengths, weaknesses, and short- and long-term improvement opportunities within the LPHS. It is also a valuable tool for identifying areas for system improvement, strengthening local partnerships, and assuring that a strong system is in place for effective delivery of day-to-day public health services and response to public health emergencies.

10 Essential Public Health Services

The 10 Essential Services (Essential Services) provide the framework for the Assessment Tool/Instrument by describing the public health activities that should be undertaken in all local communities. The three core functions of public health and the 10 Essential Public Health Services provide a guiding framework for the responsibilities of local public health systems. The core functions relate to the 10 essential services as follows:

Assessment

- **1. Monitor health** status to identify community health problems.
- **2. Diagnose and investigate** health problems and health hazards in the community.

Policy Development

- 3. Inform, educate, and empower people about health issues.
- 4. Mobilize community partnerships to identify and solve health problems.
- 5. Develop policies and plans that support individual and community health efforts.

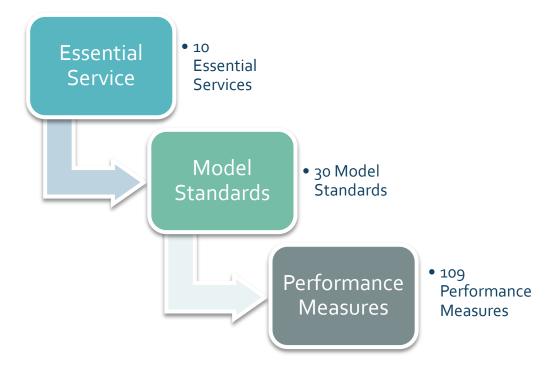

Assurance

- **6. Enforce laws** and regulations that protect health and ensure safety.
- **7. Link people to needed personal health** services and assure the provision of health care when otherwise unavailable.
- 8. Assure a competent public health and personal health care workforce.
- g. Evaluate effectiveness, accessibility, and quality of personal and population-based health services.
- **10. Research** for new insights and innovative solutions to health problems can involve all the other Essential Services.

Methodology

The Ten Essential Services provide the framework for the assessment. Each Essential Service contains two to four Model Standards, and each Model Standard contains two to six Performance Measures. A description of the Essential Services, Model Standards, and Performance Measures are found within the local instrument.

Our Process

The LPHSA meeting was held at the Walker County Library on April 29, 2019. On the day of the assessment, participants gathered for an introductory presentation. The presentation focused on the 10 Essential Public Health Services, the assessment tool and the voting procedure. After the presentation, participants then broke into 10 separate groups to address their Essential Service questions. Each Essential Service took approximately 1.5 -2 hours to complete. The LPHSA was evaluated by a survey, which participants completed at the end of the assessment.

Participants at each table were led in a facilitated discussion by a facilitator assigned for that Essential Service. The Essential Service handout was read and discussed, followed by reading and discussion of each Model Standard. After discussion, participants used color-coded cards to respond to the Performance Measure questions in each Model Standard. Further discussion occurred, when there was disparity in responses.

The Performance Measures are phrased as questions within the assessment tool, starting with "At what level does the local public health system..." and then scored by participants by level of activity. The following score chart was used to rate each performance measure:

The facilitator handout had helpful tips and tricks as well as follow-up questions that could help the group reach a consensus on the voting.

Optimal Activity (76-100%)	The public health system is doing absolutely everything possible for this activity, and there is no need for improvement.
Significant Activity (51-75%)	The public health system participates a great deal in this activity, and there is opportunity for minor improvement.
Moderate Activity (26-50%)	The public health system somewhat participates in this activity, and there is opportunity for greater improvement.
Minimal Activity (1-25%)	The public health system provides limited activity, and there is opportunity for substantial improvement.
No Activity (o%)	The public health system does not participate in this activity at all.

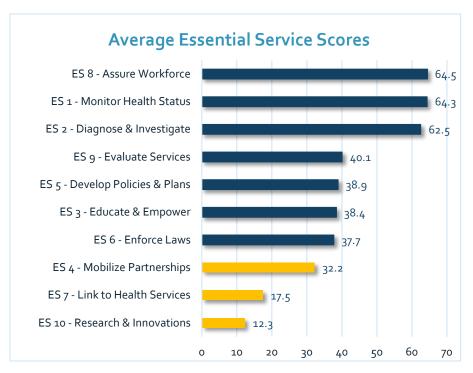

Results

Based upon the responses provided in the assessment, an average score was calculated for each of the 10 Essential Services. The score of each Essential Service can be interpreted as the degree in which the local public health system meets the performance standards for each Essential Service. Scores range from a minimum value of 0% (no activity performed compared to the standard) to a maximum value of 100% (all activity performed compared to the standard).

Average Essential Public Health Service Performance Scores

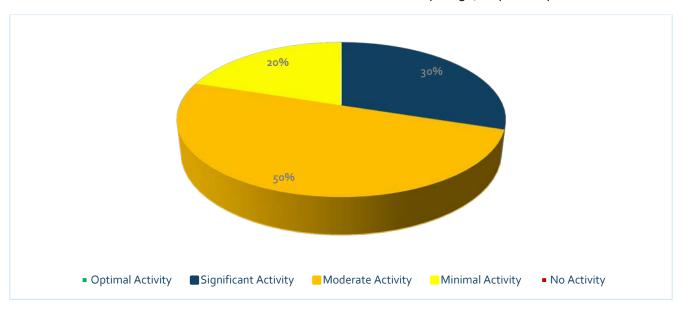

Significant performance was perceived within several areas of the Walker County LPHS, including: assure a competent public and personal health care workforce, monitor health status, diagnose and investigate, evaluate services, develop policies & plans, educate & empower and enforce laws.

The lowest rated areas of performance include: mobilize partnerships, link to health services and research & innovation.

Percentage of Essential Service Performance Scores

In terms of percentages, 30% of the Essential Services fall within the significant activity range, while 50% and 20% of Essential Services fall within the moderate and minimal activity range, respectively.

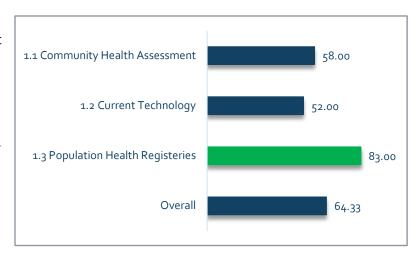

Interpretation of Results

Public health performance standards are intended to guide the development of stronger public health systems capable of improving the overall health of populations. Thus high-performing public health systems will increase the likelihood that all citizens have access to a defined optimal level of public health services. Through regular assessment guided by model performance standards, public health leaders can assure healthcare access for all, improve collaboration and integration among the many components of a public health system, ensure effective and efficient use of resources and imply innovative methods for providing health intervention services.

The detailed results of each Essential Service, discussion results and areas of improvements are summarized below:

Essential Service 1: Monitor Health Status to Identify Community Health Problems

Participants indicated that the local public health system (LPHS) displayed significant activity related to contributing and maintaining population health registries (disease tracking). They also acknowledged the importance of data in terms of informing public health decisions. They concluded that overall we do a great job performing this essential service despite the challenges and demographics of a rural community with limited resources.

Strengths	 The YMCA feeding children program Backpack Blessings CHAMPs Hiking/Biking trails Use of social media to disseminate information Connections Group There was a concerted effort made to do an assessment
Weaknesses	 Alcohol and Drug abuse Not enough resources for Mental Health Hunger Child Abuse Vaping

Short-term improvement opportunities

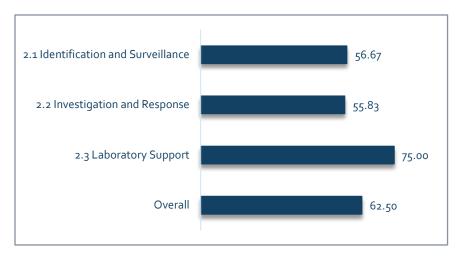

• More data collection efforts and informed decision making.

Long-term improvement opportunities

None noted.

Essential Service 2: Diagnose and Investigate Health Problems and Health Hazards in the Community

The overall activity score related to Essential Service 2 was the third highest amongst the 10 Essential Services provided in Walker County. Optimal activity was demonstrated in areas including disease case investigation protocols, public health emergency response plans, and ready access to laboratory services to support investigations of public health threats, hazards, and emergencies. It was noted that

Walker County has enough resources present to perform this essential service well, but slight improvements in education and awareness to the community partners might be needed.

Strengths	 Resources (protocol manuals etc.) Community partners update with current information State labs
Weaknesses	 Updated manuals Better information sharing SENDSS is not user friendly Partners needs more education/communication

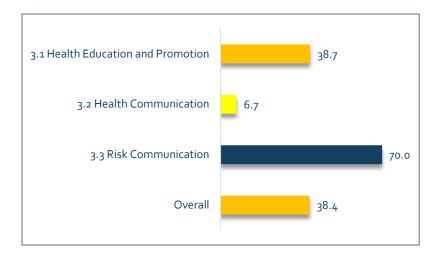

Short-term improvement opportunities

- Review protocol manuals.
- Greater awareness and communication with partners.

- Find a more effective way to distribute information.
- Improved communication and putting information out to the community.
- Auditing actions, plans, surveys.
- Third party reviews.
- Decrease lab result times.

Essential Service 3: Inform, Educate, and Empower People About Health Issues

Significant activity levels were displayed in relation to developing emergency communications plans and making resources available for a rapid response. The communication plans include preand post-event communication and planning, as well as information that is provided to the community for them to make the best possible decisions about well-being during times of crisis or emergency.

Strengths	 Starting Community Health Assessment (CHA) effort Walker County Alert System Sharing News
Weaknesses	 No health education publicized throughout the community. No health education classes Partnering with other agencies Agencies sharing news/events No employee volunteer training besides CPR

Short-term improvement opportunities

None noted.

- Continuing CHA and following through the process and results.
- Public involvement.
- Partnering with agencies and discussing Public Health issues.
- Community wide Emergency Preparedness training.
- Offering Community CPR education/training.

Essential Service 4: Mobilize Community Partnerships to Identify and Solve Health Problems

Essential Service 4 scored the third lowest activity level of the 10 Essential Services provided in Walker County. Overall the system needs to collaborate better in informing and educating most of the population, and fill gaps by organizing a community led effort and making a collective impact through a Public Health "Champion". The participants also

believed that local business involvement was lacking and needed improvement.

Strengths	Walker RocksIndividual contributions
Weaknesses	 Accessible PDF directory with links to all agency information Better collaboration among PIO personnel Lack of organized efforts

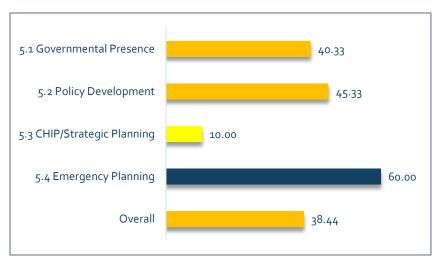

Short-term improvement opportunities

- Contacting county as first line person.
- Local staff get information prior to media for consistency.
- Regular S.W.O.T. analysis.
- Organize communication/collaboration process.
- Identify local Public Health "Champion"

- Updated website links.
- Community wide organization effort.

Essential Service 5: Develop Policies and Plans that Support Individual and Community Health Efforts

Participants indicated that there was significant activity related to emergency planning and broad representation of system partners in an emergency planning task force, but overall CHIP and strategic planning was lacking considerably. Governmental presence and policy development though performing at a moderate rate, needed significant improvements. It was also noted that monitoring and policy review activity

is ongoing at multiple levels, but not systematic.

Strengths	None noted
Weaknesses	Mental Health is a significant challenge

Short-term improvement opportunities

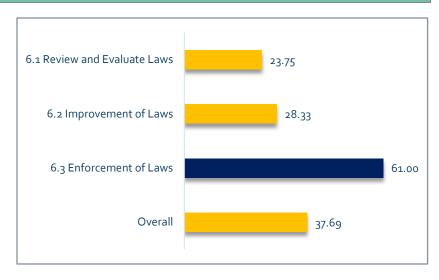

None noted.

Long-term improvement opportunities

Need for systematic review of laws/policies.

Essential Service 6: Enforce Laws and Regulations that Protect Health and Ensure Safety

Essential Service 6 performed well in areas of enforcement of laws but lacked in improvement and reviewing/evaluating of laws within the community. According to the discussion, overall the overarching area of improvement needed is the art of communication. Networking between agencies is the key and more handshakes, discussions, emails, meetings and educational outreaches are needed throughout the community.

Strengths	Dissemination of information on public health laws, regulations integrated with other public health activities
Weaknesses	 Not knowing when regulations need to be advanced/modified. Also cost of legal counsel, fear of being over charged Educating the public

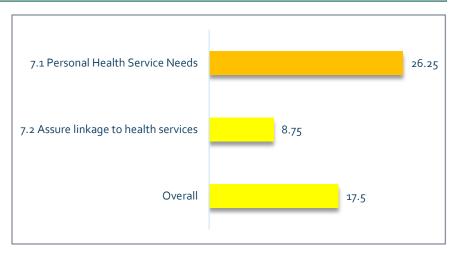

Short-term improvement opportunities

- Better communication with local codes, law enforcement through public announcements, news, social media etc.
- Schools education through children.

- Promotion of regulations/ordinances through different methods of public information outlets.
- Schools.

Essential Service 7: Link People to Needed Personal Health Services and Assure the Provision of Health Care When Otherwise Unavailable

This essential service was the second lowest scored essential services and participants felt that the LPHS did not do a good job of identifying populations in Walker County that experience barriers to personal health services. Community health care is not promoted enough so that all residents can have access to optimum health care services irrespective of their insurance status. Mental Health and Dental services

are lacking considerably for the community residents.

Strengths	Siren GPSClinic re-opening
Weaknesses	 Lack of long-term treatment facilities for mental health services Transportation Healthcare access. (Insurance etc.)

Short-term improvement opportunities

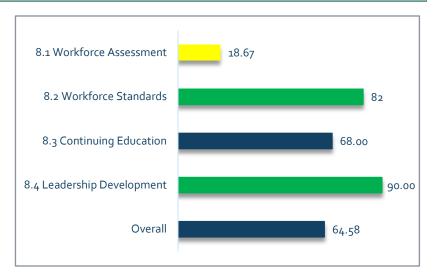

• More communication is required to link and update to the correct source, so the community can provide healthcare access to all.

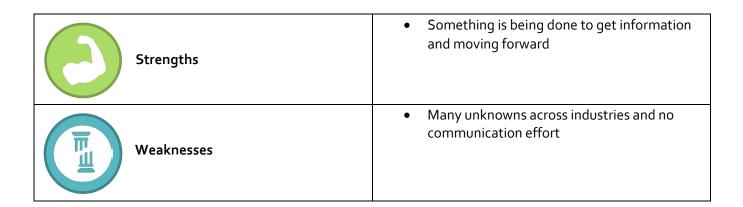

Long-term improvement opportunities

• Improve communication/collaboration.

Essential Service 8: Assure a Competent Public and Personal Health Care Workforce

This essential service was the top performing service in Walker County according to performance scores. In the questions related to policy development it was found that there is an abundance of levels of expertise and certifications. However, certain areas lacked appropriate response times and needed more input from the county.

Short-term improvement opportunities

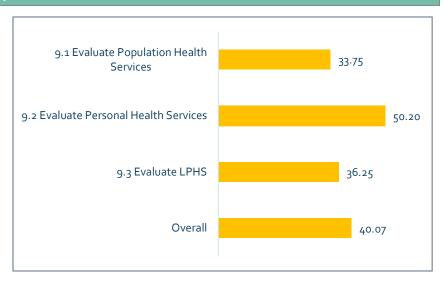

• Get information pushed out and aim for input to improve systems.

- Formalize community meetings to understand each other's role in the community and learn from each other.
- Get access to industries from various sectors in the community.

Essential Service 9: Evaluate Effectiveness, Accessibility, and Quality of Personal and Population-Based Health Services

The LPHS showed moderate activity in the evaluation of population health services. Examples of evaluations discussed by the group include immunization programs, server training, and substance abuse programs. Moderate activity level was also shown in evaluation of personal health services.

The biggest gap identified by the group was the accessibility and delivery of mental health services.

Strengths	 Surveys Closeness to Primary Health Care Accessible Internet Just started with evaluation today
Weaknesses	 Lack of affordable health care for the poor population Health department services aren't known Elderly that don't use internet can be hard to reach No hospitals in county Schools need a nurse for every school All agencies meeting minimum requirement and not realizing their full potential Communication/Advertisement

Short-term improvement opportunities

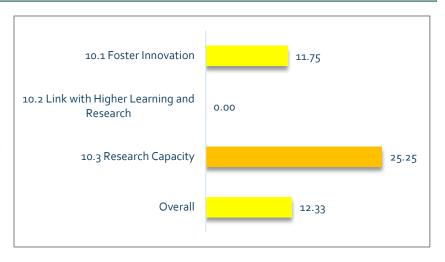

- Education on shots and spreading disease.
- Linkage among agencies such as Health Department, Fire, Police etc.
- Commercials, Billboards.

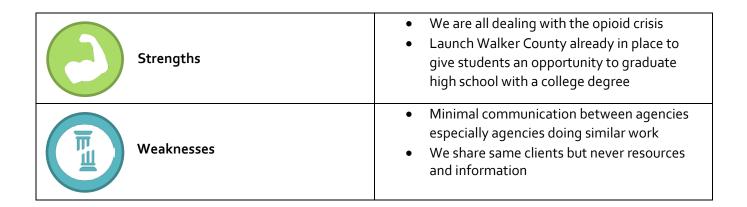

Long-term improvement opportunities

• Communication/Collaboration.

Essential Service 10: Research for New Insights and Innovative Solutions to Health Problems

This essential service was found to be performing at minimal level within the community. Several innovative ideas have been adopted elsewhere but are lacking in Walker County. The participants noted that there is a need for the schools to work with the Health Department to encourage healthy lifestyles among the youth in the community. Also, more involvement from the youth should be encouraged in all phases of the system.

Short-term improvement opportunities

- Increase education from CHAMP program and lower age to involve youth.
- Quarterly meeting with all parents for effective communication.
- Meet and Develop formal short-term goals and follow through.

- Pilot and test data and implement data collection and update activities.
- Pick top 5 agencies to start and then expand list to involve a wide variety of partners.

Perceived Priority Matrix

To catalyze and strengthen the performance improvement activities resulting from the assessment process, the participants were also asked to rate each model standard on a scale of 1-10 according to its perceived priority to them. The resulting perceived priority diagram warrants the need for shifting the resources towards health education and promotion, health communication, improvement of laws, assuring linkage to health services, linking with higher learning and research and innovative research capacity.

High Priority / Low Performance

Community Partnership
Policy Development
CHIP/Strategic Planning
Review and Evaluate Laws
Governmental Presence
Evaluate LPHS
Foster Innovation
Health Education and Promotion
Health Communication
Improvement of Laws
Assure Linkage to Health Services
Link with Higher Learning and Research

Research Capacity Constituency Development Evaluate Population Health Services Personal Health Service Needs

Low Priority / Low Performance

Governmental Presence

II High Priority / High Performance

Community Health Assessment
Current Technology
Population Health Registries
Investigation and Response
Risk Communication
Enforcement of Laws
Policy Development
CHIP/Strategic Planning
Assure Linkage to Health Services
Evaluate Personal Health Services

III Low Priority / High Performance

Identification and Surveillance Laboratory Support Emergency Planning

High

Low

Current Level of Performance

(scale of 1-100 as reported in the NPHPSP report)

Perceived Priority

High

(scale of 1-10 as rated by participants, using the "What Next?" section)

Low

Local Public Health System Assessment - Key Takeaways

Some key takeaways from the LPHSA in Walker County can be summarized as follows:

Key Strengths	Key Weaknesses
 Resource availability – Resource rich county. Awareness among population to improve health care needs and access. Competent workforce availability. Laws/Regulations in place and presence of accountability. Adequate emergency measures/processes in place. Monitoring and diagnosing health status of a community. 	 Lack of communication and public involvement regarding LPHSA activities. Inadequate mental health and dental health services. No process for improvement of existing laws and regulations. Lack of affordable personal healthcare services in the county. Health care disparities. Lack of higher learning and innovative research capacity. Sharing of resources and information. Collective impact efforts.
Highest Scoring Essential Services	Lowest Scoring Essential Services
 Assure a Competent Public and Personal Health Care Workforce 	 Research for New Insights and Innovative Solutions to Health Problems
Monitor Health Status to Identify Community Health Problems	 Link People to Needed Personal Health Services and Assure the Provision of Health Care When Otherwise Unavailable
 Diagnose and Investigate Health Problems and Health Hazards in the Community 	 Mobilize Community Partnerships to Identify and Solve Health Problems

Limitations

There are several data limitations in the LPHSA. Since a group of diverse system participants with different experiences and perspectives take part in the assessment, there is an element of subjectivity in the ratings. Each participant self-reports with different experiences and perspectives and there is also wide variation in the knowledge of local public health system's activities among these participants.

Each score of the assessment is an average. Model Standard scores are an average of the Performance Standard questions discussed within the Model Standard and Essential Service scores are an average of the scores of the Model Standards within the Essential Service. The overall score is an average of each Essential Service score.

In terms of limitations specific to the procedure and site, Walker County did have great participation for the assessment, however some organizations were under-represented, which was due to scheduling limitations. Although the participants were carefully selected and assigned tables according to the Essential Service they provided in the community, some participants felt they needed more time to go through the assessment and understand the questions. Some participants also noted the need for more clarification on the voting procedure. These limitations will be addressed going forward, when the assessment needs to be repeated.

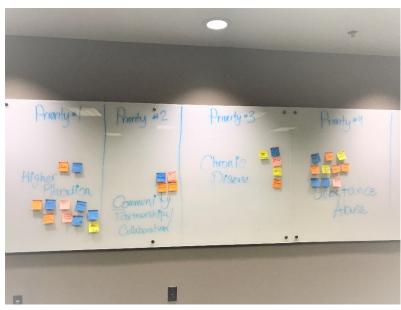

Because of the limitations noted, it should be noteworthy that these results should be utilized for guiding an overall public health infrastructure and performance improvement process for the public health system and should not be interpreted to reflect the capacity or performance of any single agency or organization.

Phase IV – Identify Strategic Issues

Phase IV began with an overview of all the data collected during the MAPP process. Key takeaways and common themes were identified during the overview phase and the steering committee and community partners were presented with a summary of all the data analysis results including quantitative and qualitative analyses.

Our Process

The strategic issues were teased out over the course of a single meeting held at the Walker County Health Department in May 2019. After reviewing the data analyses results, the participants completed a brainstorming exercise for identifying the strategic issues. The brainstorming exercise consisted of participants divided into smaller groups where they discussed in detail and created a list of top issues, leveraging the results from each of the four MAPP assessments provided to them on a summary sheet. The participants then shared their priority issues with the whole group. The participants then ranked the issues in the order of priority using post-its on large sticky posters displayed on the wall throughout the room.

Walker County Library - Identify Strategic Issues Meeting - May 2019

Results

The participants reviewed a checklist, with the following questions, in order to prioritize the top issues:

- ✓ Is the issue related to our vision?
- ✓ Will the issue affect our entire community?
- ✓ Is the issue something that will affect us now and in the future?
- ✓ Are there long-term consequences of us not addressing this issue?
- ✓ In order to address the issue, do we already have/possess the ability to acquire the needed resources?

The top 4 strategic issues in the order of priority are illustrated by the graphic below:

Top Strategic Issues

Conclusion

This meeting marked the end of Phase IV of the MAPP process. The next step of this process will begin with identifying potential stakeholders from the community who are knowledgeable about the themes within the six strategic issues. The steering committee and stakeholder involvement will continue into Phase Five: Formulate Goals and Strategies, and Phase Six: Action Cycle, which will mark the starting point of the Community Health Improvement Plan (CHIP).
